

MEGA MATH

QUICK REFERENCE CARD

INSTALLING MEGA MATH

To Copy Mega Math To A Hard Drive:

- 1) Insert your *Mega Math* Disk #1 into floppy drive.
- 2) Depending on the configuration of your floppy drive(s), type A: or B: Then, hit the ENTER key.
- 3) Type INSTALL [ENTER].
- 4) Choose the hard drive on which you want to install the game (usually C:).
- 5) Follow the on-screen instructions.

ODESSA'S FAST FACTS

Use the 10-key pad and mouse, or the keyboard number pad, to enter the answer as fast as you can. Speed and accuracy are the goals in this area.

Pass a set and you win an award, and get to move on to the next level.

DR. D. VIOUS' MIND MASHER

Click on the number you think is the answer. If you're right it gets punched into the balloon.

Play this game again and it gets faster.

DAS LIQUIDATOR'S CHALLENGE

Use your mouse to bash the bug with the right answer to the equation. Go Fast! Blow up the vacuum to win the game. Don't run out of Hammers, or the game's over.

Those pesky mice will try to blow you up. Just keep moving and they should be no problem.

ORFF STRATEGY

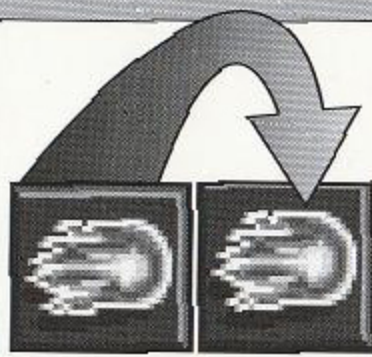

SELECT A PIECE:

Click on it with the mouse. If it's chosen it will flicker.

SELECT A SQUARE TO MOVE TO: Any square that turns gray and displays an equation is a legal move. Squares that don't turn gray are too far away. You can only move two spaces in any direction. Remember to select a piece to move first.

ANSWER THE EQUATION: Use the keypad on the screen and mouse or the keypad on your computer to answer the equation. Remember to click on ENTER.

CLONING:

If you move only one square from the original location, the piece clones and you now occupy an extra square. Cloning is recommended over jumping.

TOP STRATEGY TIP: CLONE WHEN YOU CAN.

JUMPING:

If a piece is moved two squares, it jumps to that square, leaving a blank square from where it jumped.
