Welcome to the Roman Empire

ongratulations, citizen! Caesar has approved your application to enter the Empire's government. The Emperor is eager to expand his settlements and reward citizens who can implement his will. The Roman Empire is so vast, and growing so rapidly, that even our divine Caesar cannot hope to rule it alone. He needs capable provincial governors, and that is where you come in.

Caesar appointed me, Pius Perplexus, to teach you the skills of governing. Your scribe, Clarus Lucidus, will add notes as we go along. My main interest is in teaching you what you should do, and why you should do it. When Clarus thinks you need information about how to do whatever I am discussing at the time, he adds his comments in obvious sections called "Scribe's Notes."

Your goal is to build a thriving Roman city. Caesar III has two "styles" of play: The Career Game and the City Construction Kit. In a Career, Caesar rewards success with promotions and more challenging assignments. All new governors begin their careers with the same sequence of two assignments. After you complete them, Caesar lets you choose between accepting a "peaceful" or a "dangerous" new assignment each time you earn a promotion. As long as you continue to meet Caesar's ever escalating expectations, you win by becoming Rome's next Emperor.

If the second style of play, the City Construction Kit, is more to your liking, you can ignore the Emperor and set your own goals. There is no "winning" in the Construction Kit, beyond satisfying whatever objectives you set for yourself.

You can lose either type of game if you fall very much out of Caesar's favor. The Favor rating, which measures Caesar's current opinion of you, is affected by your performance – especially your handling of your province's funds. Don't worry, though – Caesar may be a tough master, but he is fair, and will give you the chance to recover if you do fall far out of favor. Use the considerable information within the game to avoid this unfortunate outcome.

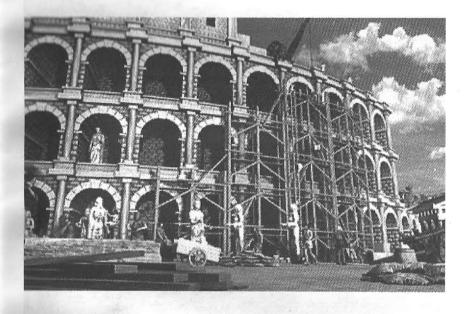

Caesar III is not a war game, although you might sometimes have to defend your city against Rome's enemies. It's not a historical reference or educational program, either. It is about building cities where people can live productive, happy lives, and having fun in the process. Caesar III gives you a strong feeling of what life might have been like in ancient Rome, but the game does sometimes depart from history. In some places, strict historical accuracy would have made the game complicated or restrictive. Wherever they faced such choices, Caesar III's designers emphasized simplicity and fun.

IN-GAME INFORMATION

aesar III has lots of information built right into the game. When you are in doubt about anything, info-click on it. For most governors, that means clicking with your right mouse button. Governors from Rome's Macintosh faction should hold down the Command key on your keyboards while clicking with your mouse. Almost everything displays a small panel showing important information when you info-click on it.

For more detailed help, click on the button in the panel's lower left corner. These detail panels often include a few words in red type. Click on red words to read related help entries. You can also choose Help from the menu bar at the top of your game screen to view the Table of Contents for in-game Help.

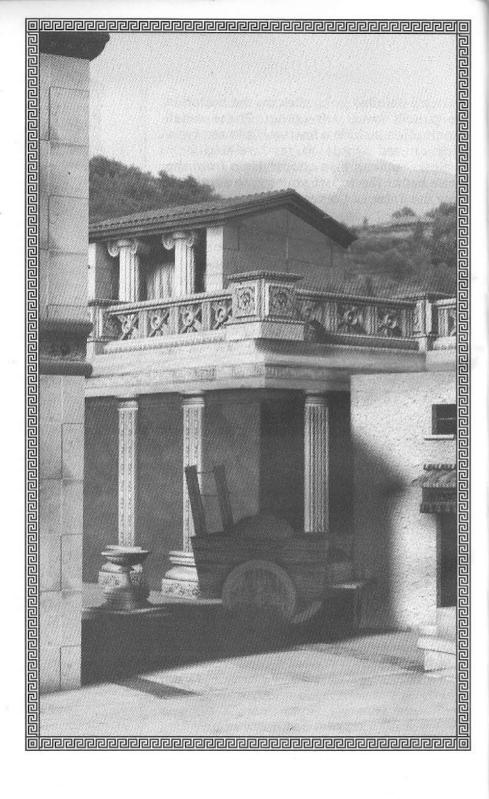

INSTALLING CAESAR III ON THE PC

ith Windows running on your computer, put the Caesar III CD into the CD-ROM drive. After a moment, Windows' AutoPlay feature displays a screen with four buttons marked Play, Install, Uninstall and Quit. Click Install to begin.

If AutoPlay doesn't work on your computer, put the Caesar III CD into the CD-ROM drive. Click twice quickly ("double-click") on the "My Computer" icon on your Windows desktop. In the window that opens, find the icon representing your CD-ROM drive. Click that icon with your right mouse button ("right-click"). Now click the word "Open" at the top of the menu that appeared when you right-clicked. Double-click the item called "Setup.exe."

The Install program performs a brief system test. Click the "Yes" button if you hear sound. Read the Welcome screen that appears next, then click the "Next" button. You are now prompted to choose an Install path for Caesar III. To change the game's location on your hard drive, click the Browse button and find the folder to which you'd like the game installed. Click Next when your choice is displayed, or to accept the path Install chose. If you're unsure where you should install the game, just use the location chosen by the Install program.

Caesar IIIs installation can take up to 10 minutes. When it finishes, you see a box describing the additions Caesar III made to your Start menu. Click "OK", then tell Install

whether or not to add bookmarks to your Internet browser.

Install now asks whether you would like to view the game's "Readme" file. Click "Yes" if you'd like to read it now. This manual went to print several weeks before the game was finished, and late changes or additions are documented in Readme. Wherever Readme and this manual conflict, Readme is correct. (Readme doesn't display until the Install is complete).

Click the Finish button. Install checks some system components, and updates them if necessary. It might then restart your computer.

Use the Sierra AutoUpdate feature accessible from your Start button to check for any free enhancements or upgrades to the game.

INSTALLING CAESAR III ON THE MAC

o install Caesar III on your Macintosh, put the game CD into your CD-ROM drive. Double-click the icon that appears on your desktop. In the window that opens, double-click the "Caesar III Installer" icon. Choose the Small, Medium or Full installation (click on each to see how much disk space it requires). Click on your choice and, holding down your mouse button, "drag" the icon to a location displayed in the right-hand panel.

The Small install runs most of the game's sounds and videos from the game CD. Choose this if you have limited space on your hard drive. The Medium install places the

most commonly used media files on your hard disk. The Full install puts the entire game on your hard disk for optimum performance.

STARTING THE GAME ON THE PC

he Install program placed a shortcut on your Windows desktop. Double-click on that icon to start the game. Or, insert the game CD and, when AutoPlay begins, click the Play button. Or, click the Start button on your Windows task bar and launch the game from the location to which you installed it.

STARTING THE GAME ON THE

hen your Macintosh finishes transferring files from the CD to your hard disk, double-click on the folder you just created. Inside, you'll find a Caesar III icon. Just double-click this icon to start the game. You might want to drag this icon to your computer's desktop to conveniently start the game later.

You must have the Caesar III CD in your CD-ROM drive while playing.

After the game loads, a short movie depicting the rise of Rome plays, followed by credits and the *Caesar III* title screen. Click on it to proceed to the game set-up panel. Here, you choose whether to begin a new Career Game, load a previously saved game, play a City Construction Kit game or exit the program.

YOUR CAREER

he first two assignments are the same for all new governors. Each assignment in the Career Game has clear goals that you must achieve to earn a promotion and move on to the next province. At first, the Roman Empire is small, and your choices of cities to govern are slim. As the game goes on and the Empire grows (thanks, in part, to your own success), Caesar lets you choose among provinces to rule next. He usually lets you choose between a "peaceful" or a "dangerous" province.

When you have such a choice, you'll see a map of the Empire showing the cities available. Click on each city for a brief description of its characteristics. When you've made your decision, click the "OK" button.

Some cities might need you to focus on trade, others on industry; most blend the two. Some assignments might require you to rescue an existing city from a crisis. Some provinces are in dangerous areas. Every assignment is different. Remember, though, that Caesar wants you to succeed. He always makes his expectations clear, and gives you the resources you need to accomplish the task at hand.

You begin your career as a Citizen. As you successfully complete assignments, Caesar will promote you through the following ranks:

Clerk Engineer Architect Quaestor Procurator Aedile Praetor Consul Proconsul Caesar

CITY CONSTRUCTION KIT

lick this button if you'd rather forget about the Emperor and his assignments, and just build a city. All options from the Career Game are open to you, except for the career Itself. There is no "winning" a Construction Kit game, apart from satisfying whatever goals you set yourself, but you can lose if you keep running out of money. Caesar is a reasonable ruler who will give you every opportunity to succeed, but his patience has limits. The first time your city goes into debt, and Caesar has to find more money for your treasury, your Favor rating drops (see page 36). After that, you continue to lose Favor whenever your city ends the year in debt.

After choosing the Construction Kit, you see a list of available cities. Click on their names for a brief description of their challenges and resources. When you decide which province to govern, click the "OK" button.

SCRIBE'S NOTE:

Career Game maps are not available in the Construction Kit, but you can replay these maps after you've played them once in the Career Game. When you begin a new assignment, the game saves the map as your rank. For example, after you start the fourth assignment, ranked as an Architect, your saved game list displays an entry called "Architect". To replay this map, simply load that saved game. These

saved games are the only way to play Career Game maps individually, so don't delete them unless you're sure you don't want to play the assignment again.

LOSING THE GAME

aesar III is simple to learn and play, but difficult to master. It is nevertheless possible to lose the game. Should you fall far out of favor with the Emperor, he will send an army to come and reclaim your city from you. Continual poor management of city funds could lead to just such a problem, so be careful! This applies to both individual assignments within your Career, and to the City Construction Kit.

FOR PLAYERS OF CAESAR II

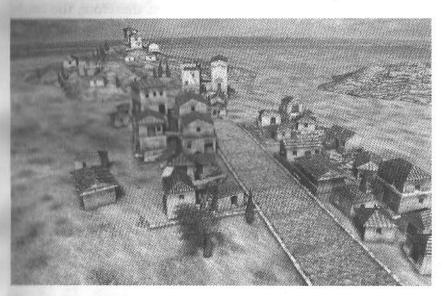

f you have played *Caesar II*, enough has changed in *Caesar III* that your old playing styles will need to change. While you will find much that is familiar, you should know about some of the more significant areas that have changed before you plunge right into the game:

The "province level" and the "city level" have been combined into one larger map (though early assignments within the career are on fairly small maps). Should you encounter any barbarians or invaders, you will find that all combat now takes place on this same map, placing your city in considerable danger should your defenses fail.

Unlike Caesar II, in Caesar III you designate areas for housing, rather than build

housing directly. You must make your city attractive to immigrants if you expect people to move in, and every growing city needs plenty of new immigrants. Once people move in, they upgrade their housing of their own accord, should you provide a suitable environment.

In most assignments (and almost always in the City Construction Kit) you need to provide food for your citizens. This should always be your top priority, since it is very hard to attract new immigrants into a city without food, and hunger can quickly turn your population to crime.

Engineers are now needed to maintain your city's buildings. Build engineering posts to send out engineers on patrol. Buildings are liable to collapse if they don't receive regular maintenance.

You will quickly see a large variety of people walking through your city. These all perform valuable tasks for your city, and you should think carefully about how and where you build roads. Whenever a road junction is reached, these little people must make a choice about which way to take; the fewer intersections you create, therefore, the more control you have over the routes your people will take.

Most services needed by houses are not "provided" simply if a building is nearby, as was the case with *Caesar II.* Instead, most buildings generate people, who need to walk past a house in order to offer that service to the house.

Most buildings which employ people must have road access to reasonably close housing. If housing is too far away from a structure which seeks employees, even though there is road access and unemployment in the city, the building will not find any workers.

The old "Empire rating" is gone, replaced by a Favor rating, which indicates Caesar's current opinion of you. Favor is important, since you will lose the game if it falls too low.

Terrain has become an important consideration in city design. You will come across islands, and need to bridge water at times to achieve your objectives. And different types of land hold different resources, from fertile land to areas rich in clay or iron ore.

Religion plays a larger role in citizens' lives. There are five gods to keep happy; ignore them at your peril.

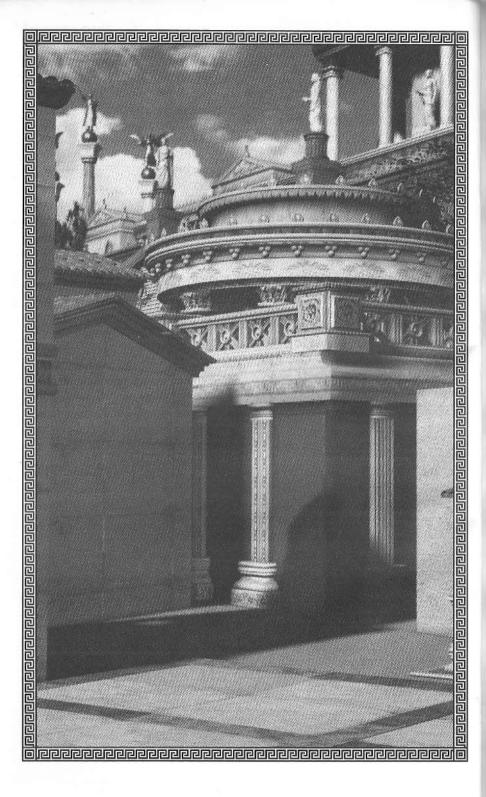

Entertainment, too, has changed: building a theater or amphitheater is not enough to please your people, as it did before. Build actor colonies, gladiator schools and more to provide performers for these otherwise-pretty (but dull) venues.

Caesar is a more "hands-on" Emperor than he was in the old game, and will interact with you more often. He is worth looking after whenever you can.

Finally, you won't hear the phrase "Plebs are needed!" any more. The computer automatically allocates your workforce to jobs. This is all that you need most of the time. When there is a shortage of employees, you can assign priorities to categories of workers, ensuring that whichever tasks matter most to your city get first claim on the available plebes.

Roman Cities, and How to Build Them

oman cities differed from modern cities in obvious ways: No skyscrapers, no motor vehicles, no subways, no electric lighting, and so on. But they were remarkably similar in some ways, too: Many Roman cities were large, busy places where hundreds of thousands of people lived (historians estimate that Rome itself housed one million residents). Cities used road networks, and had buildings several stories high.

People in ancient times had the same basic needs that we have today: food, water, clothing and other goods; a job to provide income to pay the bills; entertainment, education, religion and other services and diversions. For a Roman city, just as for a modern one, the wide variety in kinds of people and buildings, the hustle and bustle, the noise and dust all gave a city its character.

The center of a Roman city should be full of fine buildings. The Senate, the center of government for a Roman city, should be the center point around which other buildings are located. It will probably be surrounded by lavish plazas, a governor's palace, and some of the wealthiest villas imaginable. There will be numerous large, grand temples, and perhaps an oracle, providing religious service for the rich and powerful who live in and around the city center.

The bath house, of course, will be close by. This is where the wealthy come to wash away the dirt, and also to see and be seen, to talk and to plot. And after a bath, rich Romans enjoy a stroll in one of the many gardens that are usually to be found in this part of the city, perhaps bordered by statues

marking various triumphs of Rome's glorious expansion.

Other grand structures, too, will be close by: academies, schools, and libraries, where the young are educated in the ways of Rome. Theaters are there, and actor colonies to train the actors who perform the drama so popular with the wealthy of Rome.

Not far away from that, though hidden away so as not to upset the desirability of the very center, will be the bases for the essential services needed: barbers and doctors, police stations, markets and engineering stations; a reservoir and fountains to provide the enormous volumes of water needed by such a thriving metropolis; a granary to allow the market traders easy access to food stores.

Beyond the tidy central core of the city are the productive areas, where most of the work gets done, and where those who perform that work live. Here you'll find farming districts, mines and workshops, a thriving port, and warehouses close to the main road out of the province. These outer areas of a Roman city also house more popular, if noisier and dirtier, entertainment venues like amphitheaters, where gladiators fight to the death to the delight of cheering crowds, and the colosseum, where lions are brought to battle each other and the better gladiators. The finest cities of all have a hippodrome, like Rome's Circus Maximus - one of the largest buildings I've ever seen; the fiercely competitive chariot races held there are surely the finest entertainment anywhere in the Empire.

Some cities, it is true, also have areas they are less proud of. Dirty and dangerous, full of

tents, hovels and shacks, these slums can house an amazing number of citizens. You would be well advised not to venture there alone. As you create your own city, keep a watchful eye on any such districts. They are often the source of crime, occasionally even lots! It's often not even worthwhile sending tax collectors round, since the people there are so poor there's precious little tax to collect.

No portrayal of Roman cities is complete without mentioning their lifeblood: The people. How can I describe the feeling of abundant, thriving life that I get just from watching the city center as all manner of people go about their busy lives? Of course, you expect to see the many plebes, priests, prefects and market traders, and maybe the cart pushers as well. But would you imagine gladiators, lion tamers, merchants from distant lands, engineers, barbers and doctors, too? It is

quite a sight to behold.

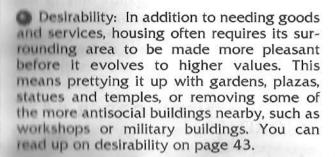

HOW TO BUILD A ROMAN

here are a few basic concepts you would be well advised to get straight before embarking too far on your journey to become the finest Governor in the Empire.

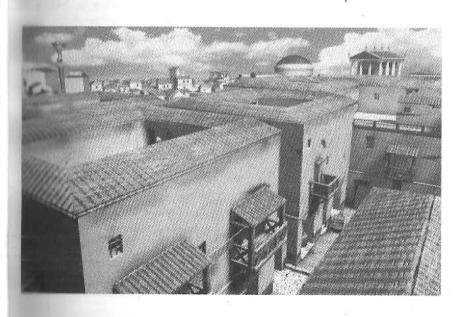

- Housing: Designate an area for housing, after which people will move in and set up their own homes, which they will upgrade if you provide them with the facilities they seek. If there's not enough empty housing, no one can move into your city, however much they may wish to. You can find out more about housing on page 41.
- Roads: Citizens prefer to walk on roads, although they can cut across gardens, rubble, or the parade grounds of forts. Most buildings employ people, and need to be both adjacent to a road and reasonably close to housing so that citizens can reach the building to start work. For more on roads, please turn to page 56.
- Food: Not unreasonably, your citizens need to eat food. People who live in tents, the simplest housing, expect to forage for their own food, but everyone else expects you, as their governor, to provide it for them. Failure to do so could lead to unhappiness and possibly severe crime, as well as preventing immigration. You can read about food on page 111.
- Unemployment: Providing jobs is nearly as important for luring immigrants as providing food. Unemployment quickly makes people unhappy, and unhappy people are likely

to leave your city, talk other people into not moving in, or, worse still, turn to crime. Beware very high unemployment. There's more information about employment on page 49.

Water access: Water is critical to all life, even that found in the slums of Roman cities. Poorer areas expect to draw their water up from deep wells. But better citizens want a nearby source of clean water, and they'll soon demand a fountain before they upgrade their housing. Of course, fountains don't please anyone unless they actually distribute

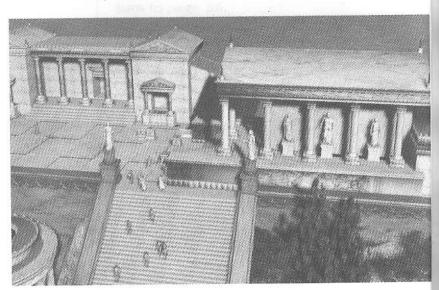

water, for which they need access to a reservoir. Learn more about the city's water supply on page 137.

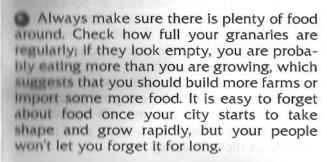

Security: Prefectures help to suppress crime, and they guard against fires in the city. Engineers inspect your buildings for structural flaws and keep them in top repair. If you skimp on prefectures and engineer's posts, your city will not last for very long. Read more on page 66.

RECOMMENDED ORDER OF PRIORITIES

any governors feel slightly overwhelmed when facing the stark emptiness of a new province, and don't know quite how to begin. It is tempting to rush in to a new city and build some of the finer structures first. Sadly, this can make citizens unhappy. They much prefer their governors to build carefully, starting with basic needs. In addition to some areas of housing,

I recommend the following order of priorities as the key to solid, long-lasting cities:

Security: Build plenty of prefectures as war expand, cities face all sorts of pressures with rapid growth, and most governors I know sleep much better knowing that there are plenty of prefects around to put out fires and take care of any signs of crime before they get out of hand.

Unemployment: Try not to let the unemployment rate rise much above 15 percent, and then only for a short time. In the early months of a new city, just a few workers can represent a large percentage of the workforce; if unemployment is high, add a new farm, and kill two birds with one stone.

Water: Since reservoirs and fountains do not need road access to their labor, it is easy to forget that they need workers to function. Think ahead about the routes your aqueducts will need to follow to carry water from its natural source (a river, or lake, say) to the expensive residential areas that will need it.

Religion: Try to keep the gods happy. Happy gods can be of help to you, while angry gods can do you more damage than you care to know about. Beware their wrath!

Money: Don't worry about how much money you're spending until you have attracted your first hundred or so citizens and met their basic needs. When you do reach that point, start thinking about your first industry and trade route. Your city will need income from exports early if it is to flourish. You should certainly be trading in at least one commodity before your population grows to 1,000. Tax income will not become important until much later, when your people have built nicer housing.

The Rest: there are many other structures to build and issues to consider, but it is hard to go far wrong if you get the basics right first.

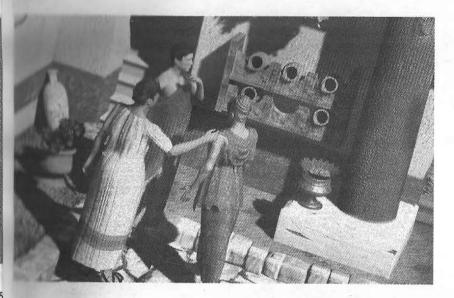

SCRIBE'S NOTE:

Remember: If in doubt, info-click. That means right-click for most governors, or command-click for the Macintosh faction. If you info-click on the people wandering your streets, they usually give you valuable information about what they think the city needs, or what they're up to. If there are problems, they will surely let you know! Info-clicking on housing always tells you what that house needs to evolve, while info-clicking on other buildings tells you if, and how well, they are operating.

Your Chief Advisor is a good fellow, too; he'll always tell you the truth about the state of your city.

Defense: In some of the more dangerous provinces, defense is an important consideration. You don't need to think about it much before you get the basics up and running and in many provinces you won't need to worry about it at all. But in those dangerous provinces, scan the map first of all to see where you may want to build some defensive walls, or place some forts, taking into account where your farmland, water sources and other important locations are.

Game Ratings

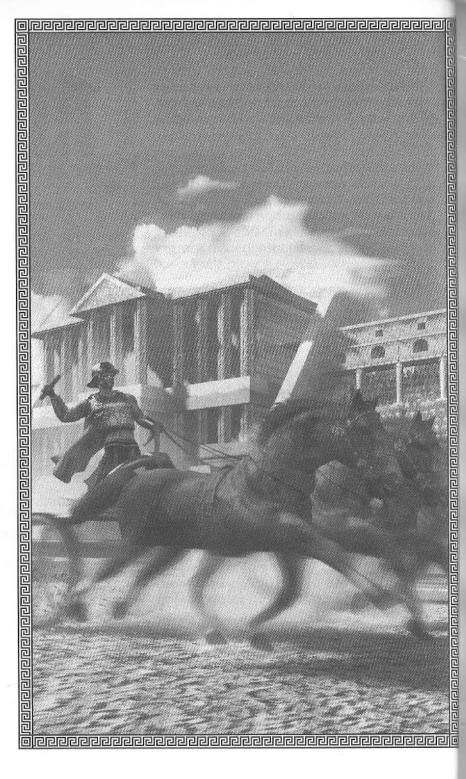

here are several measures of your city's progress in *Caesar III*, which I call ratings. These are Peace, Prosperity, Culture and Favor. Caesar is not an arbitrary ruler. With every new assignment that you take, Caesar sets specific taracts for you to reach for each of these ratings. You win a promotion to a new assignment when you achieve these goals (this does not apply to the City Construction Kit).

You can see your current ratings on the city map by looking at the Senate building; its flags represent the four ratings, and they move over time as your ratings change. Mouse help for the building gives you the precise rating numbers. Alternatively, you can consult your Ratings Advisor, who will show you the ratings and offer some advice on how to boost them.

CULTURE

our Culture rating is a measure of the "culture" in your city. "Culture" comes from education, religion, and some entertainment. Culture was very important to ancient Rome; it sought to impose its culture throughout the Empire, which is why so many languages today are based on Latin, the ancient Romans' language.

The Culture rating is calculated by comparing the number of buildings your city has in these categories with the size of your population. As the city grows, it needs more and more buildings to offer the same level of culture to its larger population.

To raise your Culture rating, build additional temples, oracles, schools, libraries, academies or theaters (the only "cultured" entertainment form back then).

Note that all these buildings must be active to count towards the Culture rating - which means that they must all have the employees that they need, and the theater needs actors to perform plays.

SCRIBE'S NOTE:

Click on your Culture rating, or any other rating for that matter, on the City Progression Panel in the Senate to see brief advice for improving it.

PROSPERITY

The Prosperity rating is a measure of the overall wealth of your city and its people.

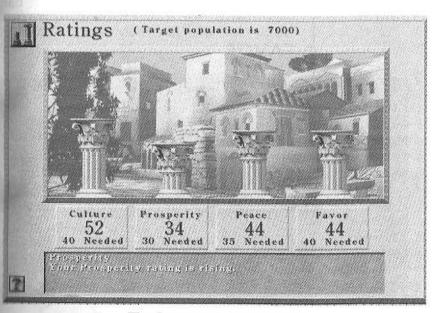

Factors which affect Prosperity include:

- Unemployment (very low levels boost the rating, high levels reduce it);
- © City profitability (excluding construction costs, if your city takes in more denarii than it spends, the Prosperity rating will rise, and if it takes in less than it spends, the rating will fall):
- If the city needs additional funds from Rome, its Prosperity rating falls;
- Should the city ever fail to pay tribute to Rome, its Prosperity falls;

- Wage rate (paying more than Rome boosts Prosperity, while paying less reduces
- Housing levels (having quite a few villas in your city boosts Prosperity, while a large proportion of your citizens living in tents and shacks reduces it);
- If lots of people eat more than one type of food, Prosperity rises;
- The presence of an active hippodrome in a city boosts Prosperity.

The easiest way to boost Prosperity is simply for your treasury to take in more money than it spends, not counting construction costs (which are, after all, enhancing the city).

The Ratings Advisor Panel

PEACE

he Peace rating is a measure of how secure your people feel. As time passes without any disturbance of the peace, the initial concern people naturally have about a brand new area begins to fall, and they feel much safer.

Disturbances of the peace reduce the rating, though. Theft and riots both reduce the Peace rating, as does any destruction of property by barbarians or invaders. The people understand that they live in a dangerous time, where such evils as barbarians and invaders exist, but they expect their governor to protect them from it. Any lapse will have a severe effect on a city's citizens, reducing the Peace rating significantly. Only prolonged periods of security can bring it back up.

FAVOR

our Favor rating shows you what Caesar thinks of you.

With every new assignment you begin, your Favor rating starts at 50, which means that Caesar is neither pleased nor displeased with you. If you please him, the rating rises; if you displease him, the rating falls. It is important for you to understand that if you do not come to Caesar's attention at all in any year, the Favor rating falls slightly; out of sight, out of mind, out of Favor.

You can please Caesar in several ways:

Make strong progress towards achieving the overall objectives of the assignment.

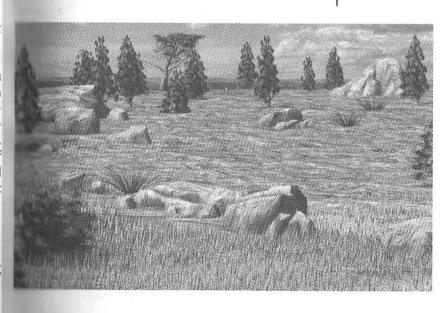

Pander to Caesar's every desire. From time to time, you may receive a request from him. This may be for goods, or for cash, or even an army. He will always tell you when he wants this stuff, and getting it to him by then makes him much more pleased with you.

Send him gifts from your own personal savings. You can send a small, medium or large gift from your Emperor's Advisor. Heware excessive use of gifts, since Caesar has a tendency to take them for granted after a while. The first should be in proportion to your own personal wealth at the time.

Sadly, it is all too easy to displease Caesar. Try to avoid the following, which will cause him to think worse of you:

Poor progress towards the assignment objectives; Caesar does not like time to be wasted.

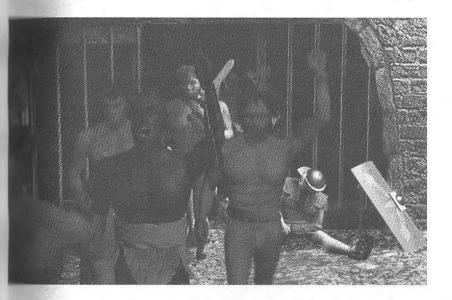

- Ignoring a request from him. If you can't meet his deadline, it's still worthwhile to fulfill the request, although less beneficial than fulfilling it on time. However, failure to ever fulfill it is likely to make him very angry toward you.
- Poor cash management. This is the single easiest way to anger Caesar. He respects sound use of the funds he has entrusted you with, but also expects you to make your cities contribute as soon as possible. Should he send you any specific instructions regarding your use of Rome's funds, try hard to follow that advice.

If you fall very far (a Favor rating of a meager 10 percent would be far enough, I fear) in Caesar's favor, he will remove you from office. He will send an army to enforce that, ordering the army to stay beside your city for up to one year. If you manage to please Caesar well enough in that time to raise Favor to at least 35 (and assuming, of course, that your own forces refrain from attacking his troops), the army will return to Rome. Otherwise, the army will enter your city to reclaim for Rome what belongs to her, and to place you under arrest.

Of course, you will be arrested whether you resist the Emperor's forces or not. I suppose that there is some small chance your own cohorts might prevail over Caesar's legions, but as Caesar's appointee, I can hardly recommend that you fight your fate. Even entertaining the thought is probably treason!

Game Ratings

Housing and Desirability

ousing is probably the single most important type of building in your city. It is the source of labor, and also of crime. It is also one of the best visual indicators of the progress of your city: as you provide more of the goods and services that your citizens want, they upgrade their homes and enhance the area around them. This is clear right from the start: instead of building houses directly, you select an area and designate it "for sale," following which immigrants will move in and set up tents. These tents will hopefully develop into better housing over time.

Tent

The house that a citizen lives in determines his or her income: the better the house, the higher the income. Fires spread more rapidly among tents than among more permanent structures, and crime is more likely to occur within poorer areas than in wealthier ones. It is always a good idea, then, to help housing evolve from its initial tents into good quality.

As housing evolves into better structures, the number of people who live in the dwelling changes. Initially, most of the changes are upwards: more and more people can live in dwellings as they grow in size. This means that when you need more workers in your city, you will usually have two choices: designate some additional land to be used for housing, or provide the services or goods that some existing houses need in order to grow.

Shack

Large Hovel

Small Villa

a better home when room becomes available, freeing up space in their former homes. Immigrants usually move into the now-vacant cheaper dwellings, as long as they find your city attractive (for more details on Immigration, see page 49).

Eventually, some houses evolve into villas. This is a significant step. Villa dwellers are much wealthier people, and can have all sorts of positive effects on your city, from a higher Prosperity rating to higher tax income. But note that far fewer people live in a villa, so whenever a house evolves into a villa, quite a few citizens are made homeless; you will see them dragging their meager belongings behind them as they search for somewhere else in the city to live.

So, how do you foster the growth of a tent village into a neighborhood of expensive villas? The short answer is to info-click on a house, and it will tell you what it needs next in order to evolve.

The things that a house needs fall into two categories: goods and services, and the quality of the surrounding area. Goods and services are largely what you would expect: food, water, access to entertainment, education, religion, and so on. The needs change as citizens become wealthier: rich citizens want nicer water, a bath, different types of food, manufactured goods and possibly wine. They also want access to better education, more entertainment, more religion, and to have doctors and barbers close by.

When I say "access to" I mean that the citizens want these services within easy walking distance. Each of the services to which

cilizens need access is provided by a building. That building generates a worker, who wanders the streets near his or her place of work, providing services to all the houses he or she passes.

If you info-click on a house and learn that it needs access to a bath-house, for example, place a bath-house nearby on a road that's likely to lead the bather to walk by the house in question. The overlay reports (for more information see page 162) are often an easy way to see precisely which route different workers follow, and hence where you may need to place another building.

DESIRABILITY

esirability is a measure of how nice, aesthetically, the area immediately around a house is.

A neighborhood can provide food, water and manufactured goods, and have good access to a variety of services, yet still suffer a lack of desirability. People simply don't like to live too close to structures that cause noise, dirt, danger or traffic. Let common sense be your guide. Would you rather live next to a garden or a pig farm?

Different buildings have substantially different effects on the desirability of the area surrounding them. The larger a building is, the stronger and farther reaching its effect is likely to be. Industries, military buildings and noisier entertainment structures are all highly undesirable neighbors, as you might expect.

Markets are more unusual: they are bad to be right next to, yet they have a positive

effect on houses a little further away. Nobody wants to live right next to a noisy, smelly place which gets going at the crack of dawn every day, yet they do want to live close enough that they can just nip round a corner to pick up some more wheat when they run out. Wells also have a mild negative effect on desirability.

Gardens, temples, oracles, educational institutions, government buildings, governor's residences, baths, statues and similar buildings all improve a neighborhood's character. To some extent, you can offset negative influences on desirability by providing positive ones, but blocks near commercial buildings are unlikely to get much beyond medium values. If a neighborhood stops improving, and its residents complain about its desirability, give them a new garden, plaza or statue. If they still aren't happy, look for unpleasant structures nearby and consider relocating them elsewhere.

Give people good jobs, a varied diet, manufactured goods, access to services and pleasant homes. They will do the rest.

SCRIBE'S NOTE:

To reach its highest level, housing needs access to a nearby market supplied with three different foods, pottery, oil, furniture and two varieties of wine. Regular visits by workers from a bath-house, a doctor's clinic, a barber shop, a hospital, priests from the temples of at least four different gods, and representatives of a school, academy, library, theater, amphitheater, colosseum and hippodrome are all required. If you supply all of these goods, and access to all of these services, then reaching the highest values is simply a matter of enhancing desirability. Info-click on houses to learn why their growth has stopped. The panel that appears shows what the house lacks, or the nearest negative influence on its desirability.

Plebes only commute a limited distance to work. They travel farther on straight roads than on winding ones, but will not walk great distances in any case. If you build a farm colony or industrial park far from your urban center, provide cheap housing nearby for workers.

GARDENS AND PLAZAS

ardens and plazas share a simple purpose: They make their surrounding neighborhood nicer. Of all the many things you could live next too, wouldn't gardens be a top choice? Gardens don't need road access, a water supply, laborers or maintenance. They cannot catch fire or collapse.

Garden

Plaza

You can build gardens by placing them one at a time, or by clicking and dragging a larger area.

Plazas work the same way, except that they can only be built over paved roads. Even paved roads are utilitarian, meant purely for moving traffic as efficiently as possible. When you replace a road with a plaza, you cover the plain flat paving stones with mosaic tiles, adding beauty and instilling civic pride in what was, before, nothing but a busy thoroughfare. Plazas will not actually reduce traffic or make the former road any less functional. They merely make a statement about the value of the properties by which they pass.

Both gardens and plazas are extremely valuable tools for governors to make their cities nicer. Both have valuable desirability effects, and are all the more useful since they can be placed as a single small plot, or used to fill a larger area.

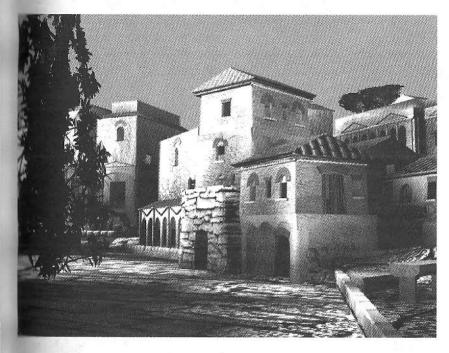

STATUES

tatues enhance a neighborhood's desirability. Monuments to prominent citizens or noteworthy events show residents that their government cares about their property values, and provide a pleasing focus or reference point to a neighborhood. Statues' effect on desirability increases with their size.

Large Statue

People, Employment and Migration

hile buildings cover most of the physical space of any city, the people who live and work within these buildings, and who you can see scurrying about the streets, are the life and soul of a city. In a thriving city, you'll see all kinds of different types of people wandering around, from school children to leisurely patricians and busy workers.

When there are no people in a city, it looks dead - and it really is dead. People give life to a city. When you first start to build a new city somewhere, you start by placing some buildings or housing area; it is only when you see people moving in and setting about their lives that you know the city is beginning to work. For this reason, as you construct more buildings, be sure to keep a fresh supply of people coming into your city, to provide workers to operate those new buildings.

Clearly, these people are absolutely crucial to your city's success. Be sure that you look after them. And, they love to talk. I humbly suggest that you consult them regularly (by info-clicking on them); their complaints and compliments can tell you much about the tate of the city.

MIGRATION: ATTRACTING PEOPLE TO YOUR CITY

hen you first start a new city, it has no population at all. As soon as you designate an area of land to be used for housing, some carts should start to move into your province and set up their

homes in this area. They know very little about you and your style of governing, but are willing to give you a chance. But after a small initial group of people (probably up to 100 or so) have moved in, you need to attract others by the way you govern.

Word about the mood of people in your city spreads rapidly throughout the region. If you citizens are pleased with you, then more people will be keen to come in; if the exist ing population is upset, new citizens are likely to stay away, and (if they are really angry you might even find some of your existing population moving out. See Page 59 for more information about the mood of you population.

Knowing what will make these people happy in your city is fairly easy: they need food jobs, and a place to live. Note that people living in tents expect to find their own food from the land; if you need more people if your city but don't have enough food foothem, create an area of cheap housing, with no facilities, and some immigrants should move in. If a city has unfilled jobs, food to eat and space in housing areas, immigrants will move in unless something else is wrong.

What could be wrong? Understandably, citizens dislike very high tax rates and low wages. If there has been a lot of sickness in the city, that, too, could make people think twice about moving in. Occasionally, you might find that an angry god has frightened others away.

Just remember to try to keep your people happy, with job vacancies and plenty of footbeing the two crucial ways of doing this.

wou talk to any of your people, they will be only too happy to tell you what they think of life; be careful, though, since they love to moan, and will usually tell you of any problem at all, even if it is minor, given half a hance. Your Chief Advisor can tell you very reliably what the overall mood of the people is at any time.

When immigrants arrive, they bring carts of their belongings with them, looking for available housing. They will move in to any housing which has space for them. Once they are settled, if space becomes vacant in a better house in the city, they automatically move into it, vacating their old home.

Some of the citzens of your city

sometimes houses devolve back to a more primitive level than they were before. This can happen if some of their goods or services are cut off for some reason. This often means that fewer citizens can fit into the building, and so some of those who used to live there become homeless. You will see homeless people dragging a sack of their belongings forlornly behind them, trying to find somewhere else to live. If they cannot, they will be forced to leave your city.

SCRIBE'S NOTE:

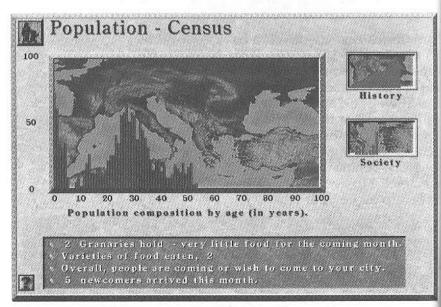

When you see people moving out of your city, info-click on them to warn why. They will not hesitate to voice their grievances.

POPULATION GROWTH

mmigration and emigration make the most dramatic changes in the size of your population, especially early in the life of a city. I should mention, though, that there will be some natural fluctuation in population size due to births and deaths. The number of births is determined by the number of people of child-bearing age in your city. People are more likely to die as they get older, and not many live past the age of 50. Newborn babies must be housed, of course, and sometimes this will make someone else homeless, to make way in his old building for the new baby.

Your Population Advisor can show you a useful graph with details of how many people of each age there are in your city. Note that immigrants of all ages will move into your city, not simply all young people.

The Population Advisor Panel

The health of your people can also affect the natural changes in population; see Page 52 for more information.

PLEBEIANS, PATRICIANS, AND THE WORKFORCE

here are two classes of Roman citizens. Plebeians (plebes) are the common people whose daily efforts keep your city functioning. Patricians are wealthy alstocrats who don't work; instead, they spend their days visiting one another, lounging in the baths, attending the theaters and debating politics, philosophy and art.

In Caesar III, all the people who live in any house which is not a villa (which will often mean everyone in your city) are plebes; only those people living in villas are patricians.

Patricians are very rich, and so pay high laxes. Having a reasonable number of them in a city also raises its prosperity. As your city grows wealthier and more cultured, plebelan apartments eventually begin to evolve into villas. Note that this will decrease your workforce, without any reduction in the number of people you need to feed.

You will soon begin to recognize various different people. All of them have their function, and you can learn about problems the lity might have just by watching these people walk the streets. If someone who is usually active is now standing still, for example, info-click on him to discover why he's not moving. Or, if you see someone who seems

Large Villa

to be a long distance from her normal area follow her to discover how she roamed so

Your "workforce" consists of approximately two thirds of the number of plebeian citizen between the ages of 22 and 50. Youngel people are studying, (in schools if you have provided them, otherwise on their own while people over the age of 50 are retired.

EMPLOYMENT & LABOR ALLOCATION

lmost every building in your city needs to employ workers in order to operate. Even if there are lots of unemployed workers in your city, a building cannot employ anyone unless it has "access to labor.

When you build a new structure that as to how far people are prepared to comemploys people, it sends a recruiter in plain mute to work, though. Sometimes a building brown clothing to look for a nearby source of won't achieve access to labor, even though it labor. As soon as that recruiter walks pas is on a road connected to some housing, if it housing (which needs to be within two halong way away. spaces of the road), he knows that his build ing has access to labor -in other words, that Once a building has access to labor, it asks

You can see how much unemployment you have right on your city map. Any citizens sitting idly on the steps around your Senate building are unemployed. One or two people means that there is some, but not too much, unemployment. Three or more people sitting around is a sign of high unemployment, which you should try to avoid.

The Labour Advisor Panel

homes to reach his building. There is a limit

workers can walk along roads from the labor Advisor for some workers. If there are enough unemployed workers in the city, they are immediately allocated to that building, and the building will commence operallons. If there is a shortage of workers in the Illy, though, the Labor Advisor decides which buildings should receive labor, and which should not.

> You might want to make different decisions about which structures should have the first laim to labor, based upon the particular sit-

uation in the city at that time. You can do the by visiting your Labor Advisor and setting some priorities for him, which he will alway follow. If you set fire prevention as your fire sample, when a wheat farm harvests its priority, for example, and food production a stop, it sends a farm hand with a cart full of your second, he will always allocate all the produce to a granary. The farmer tries to take workers he has initially to fire prevention the most direct route there, and also on his and then to food production. Should there be seturn journey with the empty cart. any workers remaining after that, he will allocate them as he thinks best to the other the second type of journey is more like a categories.

There are two types of journey. The first is a specific journey from point A to point B. For

matrol. An engineer's post, for example, unds out an engineer to walk for a certain allstance, repairing any damage in the buildhe passes. Eventually, the engineer inturns to his post. The next engineer sent mut to repair buildings in the area tries to go In a different direction overall than the last

natrol. This happens four times, with the first

matrol trying to head North, the next East, the

west South, and finally the last one West.

This way, they try to visit all the buildings in

their area.

Mut note that the more intersections there are along any one of those patrols, the less likely it is that the engineer will cover every hullding in his area. This means that you may need to provide more buildings to send out patrols in areas with complex road networks, in ensure that all buildings are covered.

SCRIBE'S NOTE:

Info-click on any building to find out how many people currently work there, and whether the building has any other needs. Watch the activity at your industries and trade facilities. When you see workers moving at half speed or stopping work altogether . . . full or empty carts standing idle . . . ships moored at your docks with no one loading or unloading them - then you need to define some civic priorities.

There will be many occasions when you have too few workers, especially in the early days of a city. You can either attract new immigrants into your city (see above, Page 49) or set priorities so that only the work you would like to be done is done. You can also instruct your Trade Advisor to temporarily cease activity in any of the industrial or farming operations in your city, which would free up labor.

PEOPLE WALKING ALONG ROADS

our city will soon have lots of differ ent people wandering along its road and paths. Citizens deliver the goods or services while walking the city streets; understanding how that works very important.

Mood and Crime

MOOD

very governor should be concerned with the mood of his citizens. If they are happy, you can take actions that will benefit the city in the long run, but that might upset a few citizens in the immediate uture. But taking the same actions when the population is already in a foul mood could had to disaster.

Hut simply, the mood of a city is a sense of how the average citizen is feeling. The mood of a city is calculated directly from the mood of each individual dwelling in a city. Your chief Advisor will keep you informed about the overall mood of your citizens. Be warned: It is quite possible to have a few houses with unhappy citizens even when the overall mood is very good.

Mood affects two important mechanisms within Roman cities: migration and crime.

the overall mood of the city is known to people for miles around, and affects immigration. New immigrants will want to move to a city which is pleased with its governor, but they won't move into an unhappy city at all. See Immigration on Page 49 for more letalls on migration.

both the overall mood of the city and the mood of each individual dwelling determine time. As mood gets worse, the likelihood of committing a crime rises.

Ilme and migration are very important to a liv's success. For a city to thrive, you need to how how to improve the mood of your city

and its citizens. Let common sense guid appet anger as a result. You have been vou: People with jobs, with enough food warned! earning a reasonable wage and paying real sonable taxes are likely to be fairly happy sovernors can improve their citizens' mood High unemployment, a lack of food, high in holding festivals. The larger the festival, taxes or low wages all upset people. The greater the benefit. For more information longer any of these conditions lasts, and the about festivals, see Page 93. more extreme it is, the greater will be the effect. So, high taxes for one month worse RIME people's moods to a small degree, but the same tax rate for three or four months has much worse effect.

Individual dwellings are easily angered happen to homes near the end of a marke time breaks out. trader's delivery route. Solve this by placing a market closer to the troubled homes.

are not very good, but nobody complain time they want to commit. because they all share the same condition hopes and goals.

and your city will thrive. But if you leave lefore riots actually break out. some people in extremely poor condition while looking after the rest, you should

rime is a direct result of a really ugly mood in some parts of your city. When you are warned about crime, or about the worsening mood in your city, take they frequently miss rations. This can easily regionsly, and try to cure the causes before

remember the distinction between the city's overall mood, and that of each individual Throughout history, the poorer people of the inuse. People are influenced by their neighworld have suffered more than their wealth wors, so that the overall mood of a city limits ier neighbors. Roman cities are no exception the effects of even very extreme anger withto this sad rule, and the people know In Individual houses. The crime overlay When a city first gets going, many of its cit hows how likely any one house is to comzens probably live in tents. Conditions the mit a crime; the angrier they are, the worse

When a house's inhabitants do grow angry mough to turn to crime, they plan their crime As the city develops, though, some housin based on how angry they are - but they will evolves into better dwellings, with better liv adjust their crime based on their neighbors' ing conditions. Any people still living in tent mood. Specifically, if the city's overall mood expect their governor to provide for them a very good, the worst crime you will suffer too, allowing them to upgrade their tents in a your city is a mugging, even if the individnicer property. If that does not happel in house was angry enough to riot. If the despite lots of services being made available werall city mood is merely average to good, to a few now very wealthy houses, the tell mu might also suffer some thefts. The overdwellers become justifiably angry. Be fall ill mood of the city needs to be quite poor

The most minor crimes are personal assault or what the people call "mugging" Muggings are unfortunate, but they do affect the city itself. If the occasional mu ging is the worst that your people have contend with, your city has no serious crim problem. Your advisors will not even not you of these crimes, deeming them too pel and a waste of your precious time. You mig notice a citizen standing on the street, way ing a torch, angry and about to commit mugging. Take this as a warning that the people's mood could be better, though the is no real damage caused directly to you city by these assaults. If a prefect is near on of these angry torch wavers, he will immed ately approach the criminal, and persuad him - with force if need be - not to comm the crime.

If conditions don't improve, though, the mood of your people may worsen. Theft the next step in a criminal career, and is clear sign of greater anger at the poor qual ty of city life. Theft strikes right at your tree RIOTS sury, as thieves rob your tax collectors break into the treasure vaults beneath you Senate and forums, stealing some or all the money stored there. You will be told any thefts that occur, and you should real things worsen.

Should you ignore the warnings, or you actions take too long to improve things, ye may encounter riots. Riots are the worst kin of crime, and can be ugly. This is one of the worst threats a governor can face, and I w tell you momentarily how to deal with riot

said, is to improve the city's mood. A happy

III Is a crime-free city, as my Greek tutor used to say. But, even with the best inten-Mons, governors sometimes must make diffidecisions which on occasion may allow a certain level of crime to arise. In these sitlations, the city's own watchmen, the prelects, are needed.

CRIBE'S NOTE:

Use the Risks Overlay to identify areas that are experiencing high rime rates. You'll notice that poor neighborhoods have the most rime. For more information about Overlays, please turn to page

Muggings don't affect your Peace rating. Each theft, though, reduces Peace slightly. Riots, being almost complete breakdowns in law and order, lower your Peace rating by quite a lot.

riot occurs when a group of very angry citizens decides to demonstrate their anger through violence. You will start to see groups of angry, torchswiftly to improve people's mood before rarrying citizens collecting on the streets in marts of the city where the mood is ugliest. When they work themselves into a frenzy, the mob moves from their own area toward a nicer part of your city, where they set fire wour buildings. Remember, too, that fire an spread, which can worsen the problems further.

The mob is not dealt with, it continues to The best way to deal with crime, as I have mam your city, setting fire to buildings. One

of the most unfortunate aspects of riots their natural tendency to increase: as some buildings are destroyed, vital services to the rest of your city can be cut off, which ca anger more of your citizens, perhaps adding further to the mobs roaming the streets.

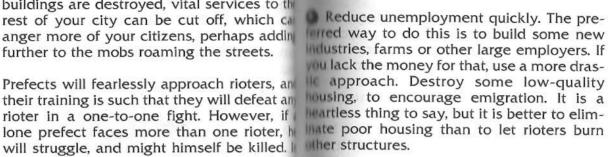

Prefects will fearlessly approach rioters, and their training is such that they will defeat an rioter in a one-to-one fight. However, if will struggle, and might himself be killed. riot situations, try to gather groups of pre fects together as a kind of "Riot Police" Remember that while some prefects dell with the rioters, fires are burning; ideally therefore, you would have enough prefer in page 131. to allow some to put out the flames while others apprehend the mob.

If riots do break out, build six or eight prefer tures close to the riot area, to provide the extra prefects you need to rapidly control the situation. Do not build the new prefectures close to the riot zone that they are likely burn the new structures down! You migl also wish to instruct your Labor Advisor set Prefectures as the top priority for labor allocation.

Riots are very bad news. Here are some measures you can take to prevent them tal ing place at all. Use them as soon as you stall to get warnings about worsening mood:

- Reduce your tax rate to the lowest lev you can get away with - even zero, if yo can afford it, and certainly below 5 percent
- Plan a large festival. (Read about festival) on page 93). Grand festivals take too long

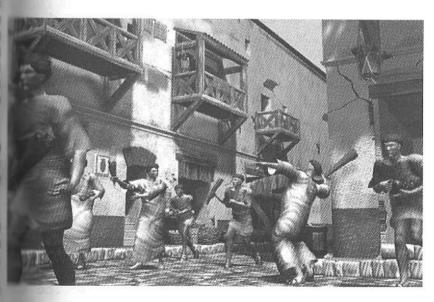

prepare, and small ones might not raise hapminess enough to head off the riot.

Make more food available, importing it from abroad if you have to. Read about food Illstribution starting on page 116 and Trade

Prefecture

PREFECTURES AND FIRE

refectures are small buildings while train employees to be prefects, a watchmen. These prefects are sent out to patrol the streets near the prefecture. At they pass a building, they put out any loos sparks or dangerous cooking fires they find reducing the risk of that building catching fire. The longer a building goes without being passed by a prefect, the more likely it is to catch fire. The Risk of Fire overlay reposshows this very clearly (see Page 162 for more information about Overlays.)

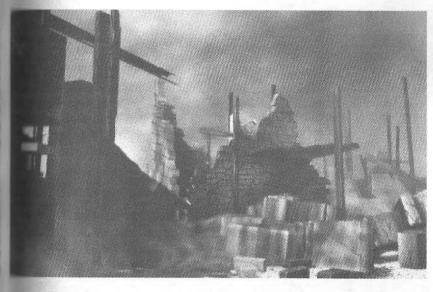

When buildings do catch fire, whether naturally or from a criminal's torch, nearby prefects spring into action. They grab the nearest buckets of water that they can find, the carry them to the burning structure and throw the water over the fire to put out the flames. A larger burning building needs more water, and takes longer to put out, than a smaller one.

Fires spread very easily, so it is important to put them out as soon as possible. The besway to do this is to have a good number of prefectures scattered throughout your city which should ensure that whenever a find does break out, a prefect will be close enough to put it out quickly.

Prefects can't prevent crime, but they do pla a critical role in resolving crime when it doe break out. If a prefect sees angry citizen protesting on the street, he approaches then and persuades them to cease their protest If the prefect encounters rioters, he what attack and kill them.

freectures need road access and labor, but have a negative effect on the desirability of a small area around them.

Engineering & Transport

INGINEERING

oman engineers are crucial to the success of our cities and Empire. Our roads are the finest anywhere in the wild. Without the efforts of hard-working influeers, our civilization would be impossi-

city governor, engineers are key for you, in that they will carry out repairs and mainmance work on your city's buildings. Without this work, your buildings will quite imply collapse.

ingineering posts are small structures that main people as engineers, then send them not to patrol the area nearby. As the engineers pass each building (actually, any building within two spaces of the road), they repair any faults they find there, preventing the building from collapsing.

You should build engineer's posts throughout your city, scattered around to ensure that they cover all your buildings.

Engineering Post

SCRIBE'S NOTE:

The the Risks overlay to spot buildings in danger of collapse. Order our Labor Advisor to assign a high priority to Engineering, so that your engineer's posts work at their full potential. A functioning engineer's post flies a blue flag.

Some structures don't need maintenance engineers. These are:

- Walls, towers and forts;
- Gardens and statues.

of nearby housing.

PATHS & ROADS

aged to plan your city accordingly.

finds and paths are essential to running city smoothly. Citizens always try to walk on roads, although they can cut through Reservoirs, aqueducts, fountains and well midens, rubble or fort parade grounds. immigrants can walk on any open land.

llew roads begin as dirt paths, just like the me crossing your province at the beginning If the assignment. As the desirability of the Engineering posts don't affect the desirable was around the path grows, your citizens automatically widen and pave these maths into true roads.

Tou can further enhance a road by building ong ago, Rome settled on straight stree plaza on top of it. Although this can be quite and rectangular blocks as the most elempensive, it is extremely sought after by cient urban layout, and you are encour your citizens; the desirability of an area rises lunificantly where you build plazas on top of

> Almost every structure you can build must onnect to a road, which means having at least one piece of road adjacent to at least me piece of the building. Buildings without and access can neither recruit nor send out imployees (wells, fountains, aqueducts, reservoirs and forts are the only exception to this rule, and do not need road access to meeive their allocation of labor).

> Il people who deliver their services as they walk along roads can only deliver these serlices to buildings very close to the road. This implies to a wide variety of people, including wefects, engineers, market traders, bathers and entertainers. Structures placed too far from a road will not receive the benefits of wher buildings' workers as they walk by.

> long, straight roads are better for traffic flow han are short ones with many intersections.

Plaza

Every time citizens reach an intersection they must choose which direction to go This means that you have far more continuous over where people will walk when there are fewer intersections on your roads. If a citize finds his path blocked, he turns around an goes back the way he came.

CRIBE'S NOTE:

Houses need to be within two squares of a road. All other buildings that require road access must actually touch a road.

You can build roads one segment at a time by clicking individually on each square the road will run through, or you can "drag" a road as far as you want.

To drag a road, choose the road tool and click where you want the road to begin with your left mouse button. Holding the mouse button down, move your cursor across the screen over the route your new road will take. The total cost of building that length of road follows the cursor. When you release the mouse button, the whole road is built and your treasury pays the cost.

If the whole road disappears while you're dragging it across the map, some obstacle is blocking the road's route. Build the road up to that point, switch to the "dig" tool, remove the obstruction, then resume laying your road.

BRIDGES & WATER TRANSPORT

Il provinces have lakes, rivers or sea coast. Trading vessels can often us these waterways to carry goods I faraway cities. Flotsam entering one side of a navigable channel, although not waterborne trade routes have flotsam.

rour engineers have designed two clever bildges, which are adaptable to different lives of river. One is cheap and can be built m many places, but does not permit ships to mass underneath it, while the other is sturdier and taller, does allow ships to pass undermeath, and is understandably more expen-IVe. Pedestrians will walk happily over both types of bridge, even with carts.

Note that rivers may only be bridged at cerrain points, usually where there are two fairly straight, even river banks opposite one another, enabling your engineers' construclion methods to hold.

Ship Bridge

SCRIBE'S NOTE:

Bridges don't affect the desirability of nearby housing.

You can see from the Empire Map whether there are any cities with which you might want to trade by sea. If there are, don't build a low bridge over the river, or you'll block the passage of sea merchants. If your province has no sea-route trade partners, then it doesn't need locks, and this doesn't matter. Build either type of bridge wherever it uits you. Pius gets to trade on page 131.

DOCK

ocks allow trading by water, by providing a place for ships to offload their goods and stock up with new goods.

There are limits as to where docks can be bullt: they need waterfront along one side, the map and exiting another is one indication which means you have to find a straight stretch of river wide enough to fit a dock.

Dock

The building is placed half on land and half over the riverbank.

Docks employ workers. Some of these operate cranes to haul goods on and off each ship; others take those goods in a cart to a nearby warehouse, or collect goods for export from the warehouses where they are stored. These cart pushers will walk all overyour province, if they must. As you can imagine, that would take a long time, and all the while the ship is sitting in your dock, idle A dock really should have a warehouse near by, therefore, to accept imports and to provide it with exports. (For more on warehouses, see page 116.)

HIPYARD & WHARF

shipyard builds fishing boats. The fishing boats operate from a wharf.

If you see seagulls circling over a patch of water, then your province is blessed with with. Fish take the place of animal meat in your people's diet. For more detail about mod, see Page 111.

If your province contains fish, build a shipyard on the shore of the same body of water that has the fishing grounds (as marked by the circling sea birds). The shipyard needs mad access and employees to work.

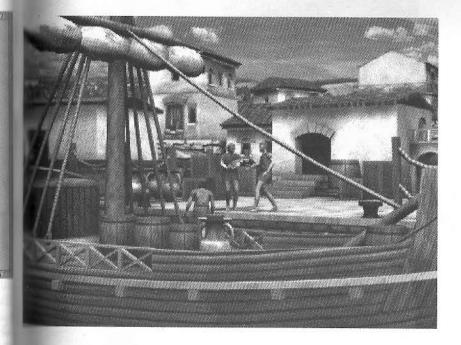

Shipyard

SCRIBE'S NOTE:

Once a ship moors at the dock, it remains tied up there until it has off-loaded all the goods it is selling to your city, and has received all the goods sitting in warehouses ready to be exported by sea. That can take a rather long time, especially if the warehouse with the goods for export is a long way from the dock. Building extra warehouses near the dock can speed this process up, and thereby allow you to do a lot more trade.

Only one ship at a time may moor at a dock. If you are planning to do a large volume of trade by sea, you may need to build several docks. Docks make highly undesirable residential neighbors.

To run a fishing industry, you also need a least one wharf. Your fishermen work out of the wharf, not the shipyard. As soon as a boat is finished at the shipyard, it will sall over to a vacant wharf.

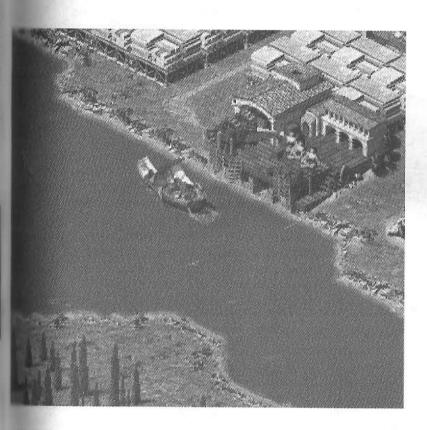

Wharf

Each wharf can service one fishing boat. A long as the wharf has labor access and enough laborers, a fishing boat puts into the wharf to take on a crew, then sails to the fishing grounds. When its hold is full, the boar returns to the nearest wharf to unload it catch. As soon as it's unloaded, the boar returns to the fishing grounds. Wharf worker take the unloaded catch to the nearest granary, if there is one with space, or ware house.

SCRIBE'S NOTE:

The shippard and the wharf both need good road access, a labor supply, and regular maintenance by engineers and prefects. They are, as you would expect, highly undesirable neighbors.

Education

ducation is a large part of what separates Romans from barbarians, and passes our culture along to new generations.

SCHOOL, ACADEMY AND

hree educational establishments may be built in your cities: schools, academies, and libraries.

in order to evolve, even fairly basic houses need the services of a nearby educational establishment. The more evolved the house becomes, the greater its need for access to more education; very advanced housing requires access to all three educational buildings. For more on house evolution, see Page 41.

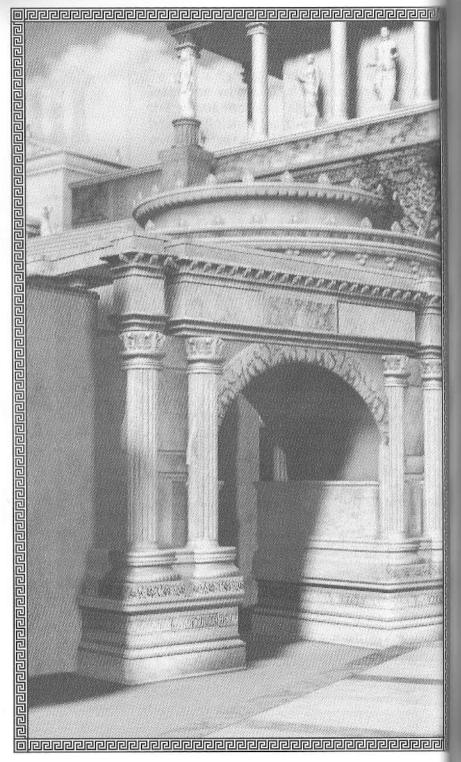

Besides giving individual houses access to education buildings, the city has a more general duty to educate young people. The total number of people of school age (up to 13 years' old) and academy age (14 to 21 years' old) in your population determines your overall demand for schools and academies. for fast-growing, newer cities, the number of educational establishments needed to allow housing to evolve is probably more than enough to educate all the children. Once the city grows substantially, though, your city probably has many more youths to educate than are served by the schools and academies you built just to provide access for housing. You might need to build additional educational establishments.

School

Academy

Education

Library

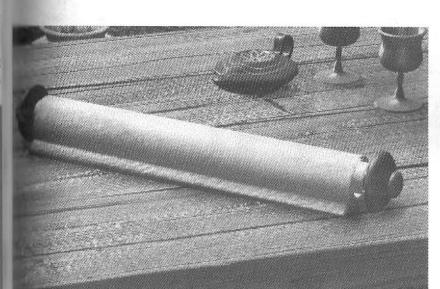

The overall supply of education in your city affects your Culture rating. Classroom size li the key to raising the education component of your Culture rating: smaller classrooms (at calculated from the number of school- or academy-aged children and the number of working schools or academies in your city yield a much higher Culture rating. Failure to educate all the people of relevant age hurti your city's Culture rating. One school can educate 75 pupils, while one academy can educate 100.

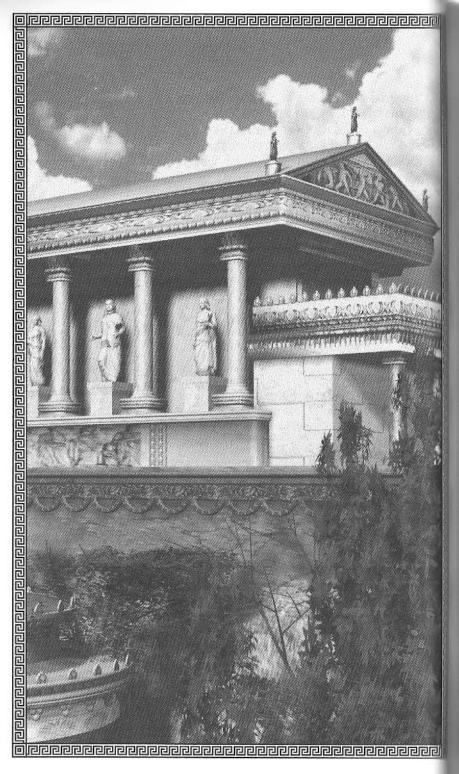

Adults want access to libraries throughout their lives; one library can serve 800 people

SCRIBE'S NOTE:

Consult your Education Advisor at any time to see how many citizens fall into each school-age category, and how many students your educational facilities can handle. Use the Population Advisor's Census graph to view your city's age composition.

Due to the noise and antics of young children, schools slightly reduce the desirability of property next door to them. Academies and libraries exert a somewhat larger positive influence on desirability. All three buildings need labor and road access.

owever wealthy we become, however ambitious our plans, however well-fed and happy our citizenry, we are but mortals. We ignore the gods at peril. If anyone ever had the arrogance to found a city without religious structures, history has forgotten the attempt.

THE GODS

ive gods should concern you. Each has his or her own area of interest, and they all crave adoration from you and your people. Build temples to make them pleased with you. When you build a temple, you are asked to select a god to dedicate it to.

toman gods are jealous, however, and grow angry if you build too few temples for the lize of your city, or if you dedicate fewer emples to them than to the other gods. If you anger the gods, they will make you and your city suffer.

The gods will each send you a mild disaster If you upset them. Take this as a warning. If you continue to treat them without respect, they become truly wrathful, and send you a serious disaster. Each god can make you suffer in a unique way.

the gods are by no means all bad, though. Should you particularly please any of them, they might bestow signs of gratitude on you, again each in their own special way.

You can also dedicate a festival to one of the rods, which causes it to think better of you.

Religion

84

See Page 93 for more information about fer tivals.

Ceres is the goddess of agricul ture. Since everybody needs to eat, keeping her favor is a very good idea. Her moods can affect whether people eal abundantly, or starve.

Neptune, the god of the sea, watches over the province's sailors, both on trade ships and fishing boats. People say that Neptune's temper causes mighty storms.

Mercury is the god of commerce. All citizens who engage in commerce or industry expect you to honor Mercury, especially if their produce is precious to you.

Mars, the god of war, watches over your soldiers. If they feel that Mars is withholding protection, your legions might be less reliable when you most need them.

Venus is the goddess of love When Venus is unhappy, she is apt to share the feeling with vour citizens. noticeably depressing the mood of your city. She has also been known to play with citizens' health.

low well you give your citizens access to places of worship affects your city's Culture rating. Each religious structure has a capaci-Your Culture rating suffers if more people want to use each temple or oracle than its rapacity allows. You have been warned!

Consult your Religion Advisor to find out what each god thinks of you. If you see lightming bolt symbols beside the word expressing a god's feeling towards you, it's time to act. The more lightning bolts there are, the more likely the god is to act out his or her anger. One or two bolts mean that you should have time to appease them. If four or live bolts are displayed, you might not be able to appease them in time to avert disasler. Of course, any action that you take to please them will serve you well in the future invway.

TEMPLES

ach temple is dedicated to one specific god, who derives pleasure from seeing the temple devoted to him or her. lemples also improve a neighborhood's desirability and enhance your city's Culture rating. Temples employ priests, who bestow access to their patron god as they walk around their local area. The very best neighborhoods need visits from priests of at least four different gods.

You can build both large and small temples. larger temples are more expensive, but sat-My their god to a greater extent than a small temple; they also have a much greater effect on desirability than do small temples.

Small Temple

Large Temple

THE ORACLE

racles are a special type of temple dedicated to all the gods. They provide the same benefits as temples enhanced desirability and a higher Culture rating - while pleasing all gods equally. It can get quite expensive, and take up a lot of land, to build all the temples you need in an area to keep the gods happy. Oracles solve that, by pleasing all the gods with far less physical space and less cash investment than an equivalent number of temples would take. This makes oracles especially powerful and useful.

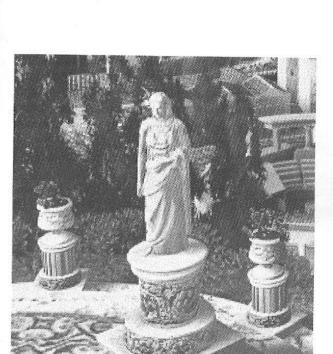

Oracle

As is usually the case when something sounds too good to be true, oracles do have a down side. To build an oracle, you need supplies of marble. Not every assignment will have marble available, and those that domight require you to import it at a fair price. Furthermore, oracles do not send out priests to minister to the population. The oracle's role is simply to honor the gods, and provide a place for citizens to come and worship their gods.

SCRIBE'S NOTE

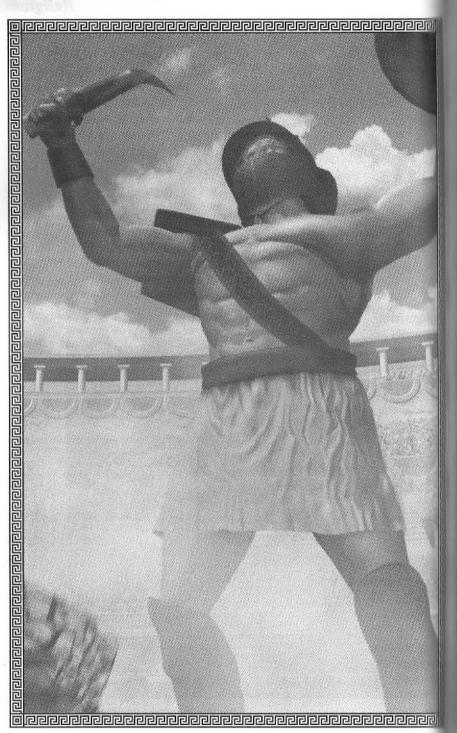

Consult your Religion Advisor to check your city's standing with the gods. If any are angry with you, build them more temples. If that's impractical, or you need to pacify a particular god quickly, hold a festival in that god's honor. Pius speaks more of festivals on page 93.

Each oracle or large temple that you build needs two cartloads of marble. Read about marble on page 125.

Entertainment

ife should never be all work, even for plebes. Again and again, Roman history has shown rulers the wisdom of produling diversions for their people.

VENUES & PERFORMER

our city can offer various forms of entertainment. You must build both the venue at which a show takes place and a base for the entertainers who will perform there. Larger venues allow more pectators to watch. In order of increasing tre, venues are the theater, the amphithemer, the colosseum and the hippodrome. Actors are trained at an actors' colony; gladators learn their trade at a gladiator school; lions are tamed at a lion house; and chariomers are trained where their chariots are produced, at the chariot maker.

mall benefit, as long as it has road access and employees. Without performers, the venue's staff becomes a little desperate, and tiles to entertain people there themselves - hough the results are barely better than nothing at all.

ach performer school trains specialists to intertain the crowds. Once trained, the performers walk to suitable venues, where they but on a show for a set period of time. After that time runs out, the show is over. Unless inother performer has started a new show, the entertainment value given by that venue

Gladiator School

Actor's Colony

Entertainers walking through the streets let houses know that they have access to entertainment. If a house is quite close to an active venue with lots of current shows, but no performer walks past it, the house gains no benefit.

Performers are often strange people and undesirable neighbors. Actors are the only exception; their drama is considered to be of such a high level that their presence adds a mild boost to an area's desirability. Noise and danger, plus the stench of blood, make glad iator schools, lion houses and chariot maken bad for a neighborhood's desirability.

SCRIBE'S NOTE:

A performer school frequently supplies entertainers to more than one venue. Pay some attention to this, for it is easy to keep building new venues, thinking that the existing performers will be enough. Info-click on venues for up-to-date information on what shows they are putting on, and check the entertainment overlays for each type of entertainment to see whether you need to build any more performer schools.

Try building performer schools some distance away from the venues, forcing performers to walk through some housing areas to get to the venues, to obtain maximum entertainment coverage.

THEATER

omans find life unlivable without regular access to plays, concerts and recitations set in well-designed theillers and amphitheaters. Theaters tend to attract literate, cultured audiences, and are desirable neighbors. Theaters host only plays Maged by actors.

AMPHITHEATER & **COL OSSEUM**

mphitheaters also host plays staged by actors. While some plebeians appreciate fine arts and the classics. they are more likely to prefer the arenas. Amphitheaters can also be used for gladiatofights, which help satisfy the people's live of dangerous entertainment. A fullyimployed amphitheater should have both actors and gladiators.

the colosseum holds gladiatorial combats, as the amphitheater does. Colosseums are also large enough to add animal shows to their repertoire. The Roman Empire's foreign expeditions often bring back fierce, exotic inimals - lions being a prominent example. People have a lusty appreciation for fights lietween animals and gladiators. Fights between different animals are always a big law; what better way to spend a relaxing illernoon than the exhilaration of watching lons and gladiators fight to the death?

HIPPODROME

hariot racing is the only form of entertainment more popular than colosseum shows. A hippodrome, like

Entertainment

Theater

Amphitheater

Colosseum

Rome's Circus Maximus, is an enormous structure, and no city can support more that one. The structure requires more engineering talent than is available in early assignments. Chariot races have a long, distinguished his tory. The very fact that we use the old Green word "hippodrome," which means "hore racetrack," reflects the ancient origins of the spectacle.

The hippodrome is highly prized by your clizens, since it is such a grand and expensive structure that very few cities have one. You people will feel more prosperous if you bulk one for them.

Colosseums and the hippodrome are undesirable neighbors. Citizens enjoy the performances but dislike having all of that trafficthrough their neighborhoods, not to mentle the noise and trash. Amphitheaters often gethe newest and most popular plays, and make desirable neighbors despite their size.

Hippodrome

HISTIVALS

omans have always loved festivals. Even when a city has plenty of entertainment, there's usually precious littent time to enjoy it. A festival provides more for a city's hard-working citizens to make the facilities offered, or simply to eat, link and be merry. Festivals always improve litzens' mood, and more so for larger festimals. This means that people work harder, making up for any time lost during the festimal itself.

ou may plan a small, large, or grand festial, the larger ones cost more, and take longer to plan, but yield greater benefits. The and festival also requires you to provide mough wine for all your people; if you do not have enough wine for this, you will not able to hold a grand festival.

happy. When you plan your celebration, you hoose a god to honor, and that god is bleased when the festival occurs.

SCRIBE'S NOTE:

Working theaters with active shows boost your Culture rating. No other form of entertainment affects the Culture rating.

The city has an "overall" need for entertainment, beyond that needed to provide access for individual houses. It is perfectly possible for more citizens to have access to a venue than could ever possibly fit inside it! Good overall coverage enhances the entertainment available to each individual neighborhood.

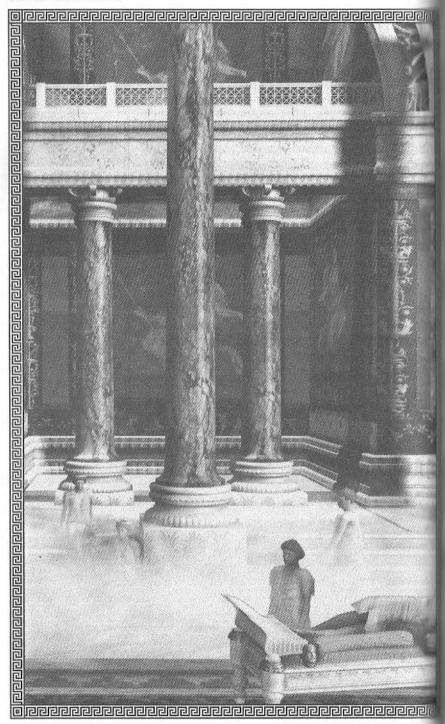

The Entertainment Advisor can show you how many of each type of amusement are working, how many total shows are available, how many citizens are served and the overall adequacy of entertainment. If any type of venue is rated "below average" or "poor," use the Entertainment overlay to decide where to erect new buildings.

SCRIBE'S NOTE:

restivals take some time to prepare. Try to remember to hold one regularly, and don't wait for a crisis to remind you. A festival can wert divine anger and take people's minds off their grievances, it's rue. But if you wait until one is desperately needed, the gods might trike, or the people take up torches, while you are still preparing the party.

fou will not benefit as much from the second (or any subsequent) intival you hold within the same year.

Health & Sanitation

oman citizens usually enjoy good health, assuming that they have a varied diet and see a doctor regularly. They are also very particular about keeping memselves clean. Your city can build some fluctures to help the public ward off disease.

your people become unhealthy, they more more susceptible to disease. When become diseased, they need treatment a hospital. If there is no room in a hospital that time, they will die.

ANITATION: BATH-HOUSE AND BARBER

ccess to public baths and regular barbering matter greatly to Roman people, though they contribute more their social well being than their health. The and barbers contribute to the desirability of any area, and their services are needed better housing. Citizens like to spend as much time at the baths as they can, after all, and who wants a long walk home after being beasantly cleansed and relaxed?

mployees; the bath-house also needs suplles of water, via the underground pipes onnected to a reservoir.

POCTOR'S CLINIC AND

octor's clinics are small and employ few staff. They train doctors, and send them out to check up on the

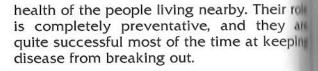

Bath-house

Doctor's Clinc

Hospitals are larger than clinics, and employmere staff. They are needed if, despite you best health policies, disease does break ou One hospital cures a small number of people at a time, which should be ample for small city populations. Larger cities need monhospitals. Your Health Advisor will tell you you need more hospitals.

If hospitals do not have their full allocation of staff, they can only cure a reduced number of patients. For every member of staff they are missing, they are able to cure one less patient.

Clinics do not affect the desirability of an area. Hospitals have a minor negative effect on the desirability of the immediate area probably due to the smell and presence of diseased people.

DISEASE

f people cannot eat full rations, the strength wanes, and they are more like ly to fall ill. If they are not seen regularly by a doctor, their chance of getting sick rise further. Occasionally, travelers bring disease to your city despite your best preventative efforts. Venus has also been known to semplagues upon a city which has incurred he wrath.

When disease strikes, a certain number of people fall sick. If there is space for them hospitals, they will be cured. Those who can

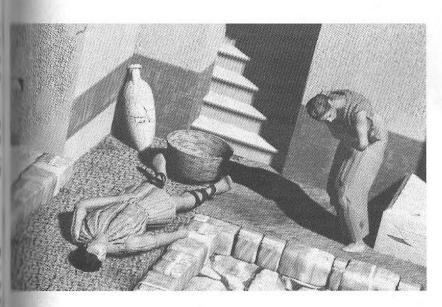

be taken in by the hospital, unfortunate-

Disease understandably sours the mood of your citizens somewhat.

Hospital

Government, Administration and Money

n your city, you are the government. Your role is to direct the construction of a city within your province, according to my guidelines and objectives given you by the sar. Government is also expected to insure a steady food supply, to provide watchmen (prefects) to protect against fire and crime, and to provide defense against my hostile barbarians. (A "barbarian" is anyone who is not Roman). You carry out these toles yourself - with the help, when you want it, of your various advisors.

All this government activity costs money, which must come from somewhere. Tax revenue is one of the two main sources of funds for any city (the other being trade). Tax collection is the ugly side of government; unpopular but necessary. No one enjoys paying taxes, although everyone appreciates the ervices that their taxes buy.

THE SENATE

The Senate building is the city's main administrative structure. It houses your advisors, who maintain banners outside indicating the city's main four ratings: Culture, Prosperity, Peace and Favor, in that order. As the city progresses, these flags die or fall to reflect your performance, so you won't need to visit your Ratings Advisor to see how well you are faring.

Unemployed people like to sit around on the senate's steps, where they know that they're more visible to their governor. When you see people lounging on the steps of the Senate,

Senate

your city has at least some unemployment. The more people there are, the more unemployment you have.

The Senate also employs tax collectors to walk through nearby neighborhoods collecting taxes due. (see Tax, below). The Senate's coffers store the money until it is transferred to your treasury at year's end. The Senate is a nicely maintained building and a center of wealth and power, and therefore a very desirable neighbor indeed.

Being such a grand building, the Senate Is costly to build and requires many employees to function at capacity. It is nevertheless wise to build it fairly early in your city's life. Besides generating some tax revenue, it is often at the heart of the nicer district at the center of your city, and it gives you an easy view of information that's valuable to your city's progress right from its early days.

No city can ever have more than one Senate building.

FORUM

he forum is a satellite office of the government, usually found in outlying neighborhoods. Its particular task is to send out tax collectors, raising revenue from areas too far from the Senate's own collection routes.

There is no limit on the number of forum your city may build. Because forums make desirable neighbors, many governors include a new one whenever they expand the city's residential areas.

Forum

CRIBES NOTE:

Because the Senate and forums usually have money in their vaults, invaders, rioters and criminals often target these structures.

Fach figure on the Senate steps represents 5 percent unemployment. When you hold your mouse cursor over the Senate building, a white text box shows some of your city's vital statistics.

To gauge the need for forums in the city, visit your Finances Advisor. If the proportion of citizens registered for taxes falls much below 100 percent, use the Commerce: Taxes overlay to find houses that aren't paying their fair share, and consider building a new forum somewhere nearby. Some very poor neighborhoods won't owe much in taxes anyway, and you will have to weigh whether or not they are worth building a forum. You might decide that 90 percent tax registration is high enough, if the 10 percent who aren't registered are mostly tent-dwellers.

TRIUMPHAL ARCH

ome knows no greater splendor than the Triumph of a general returning from campaign, with his victorious troops escorting thousands of prisoners in chains and wagon after wagon of booty through the city. For generations, Romans have commemorated these Triumphs by building arches on the Via Sacra, Rome's greatest road.

The triumphal arch is the most impressive monument that your city can build. These structures are dedicated to successful military campaigns, and so as governor you may order one built in your city only when one of your armies has returned victorious from a battle in some distant province. An arch dramatically boosts the desirability of the surrounding neighborhood.

Triumphal Arch

MONEY

oney is strange stuff. With absolutely no intrinsic value, its sole purpose is to acquire other things. It is a means, not an end. And so It will be with your cities. Money is never a specific goal for city governors, and yet all must manage it wisely if they are to succeed at the goals they have been set.

The Emperor grants you a generous sum to found your colony, but that will run out all too soon. When it does, your city had better be generating a profit, or be very near to doing so. Caesar might sometimes come to your aid with supplemental funds, if you assignment is particularly important to the Empire. And he will often secure permission from Rome's senate for you to run a temporary deficit.

This is a lifeline, but one which can be dangerous to your future. The city pays interest of 10 percent on any negative balance, making it that much harder to earn a profit. And if worse comes to worst and you still ow money when your credit line expires - well hope that you do not. Your Favor rating falls whenever Caesar has to rescue you from financial trouble.

Apart from the initial sum you are given to invest in a new city, and possible additional investments if Rome thinks it appropriate your city can raise money from two sources taxing its people, and exporting its products Provinces vary in their industrial resources but export income is frequently extremely significant. Always make a point of seeing how to make some profits from exports (see "Trade," page 131).

COSTS, AND CONTROLLING

ities have all too many uses for money. Constructing new buildings is usually the biggest expense, especially in periods of growth for a city. It is very asy to simply build whatever you wish to build without considering its cost. Remember that some buildings cost significantly more to build than others. Wages are usually the next largest expense. Other costs include interest on any debt owed to Rome, your own salary, the cost of any goods your city imports, the tribute due to Rome, and sundry expenses like festivals or thefts.

SCRIBE'S NOTE:

If your city finds itself in a poor financial state, you would be well advised to pay urgent attention to improving things. There are several ways to do this:

Stop constructing new buildings, or build only structures that will boost your city's cash flow. One or two buildings (like forums, or a dock to allow exports, or something that will allow some housing to evolve to a higher level and hence pay more taxes) might actually bring in more money very quickly.

Raise taxes. This has obvious negative effects on the mood of the city, but, especially for a short while, can bring in substantial additional funds.

Reduce wages. Although it won't make you popular, this action can uve money in one of your city's biggest expense categories and, for a short while, can prove extremely useful.

• Sell goods. While this is something you should normally do anyway, there may be times when you need to sell more than you perhaps would like to. Maybe your housing can wait a little longer for that pottery or furniture.

Stop buying imported goods. Frequently, imports are used for luxuries, such as a more varied diet, or olive oil. Interrupting the flow of imported luxuries for brief periods can save you a good deal of money without unduly inconveniencing your citizens.

TAXES

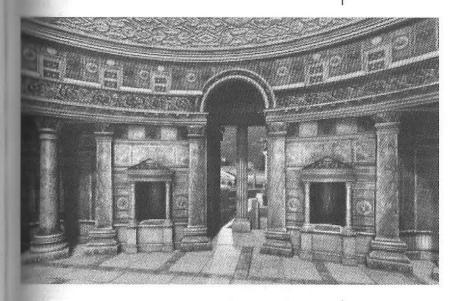

axes are levied on citizens' income which is measured by how nice thell housing is. As a house evolves, its inhabitants pay more tax. Villa inhabitants (patricians) pay very large amounts of tax But nobody pays any tax at all unless a tax collector walks past the house to register if and collect the tax. Tax collectors are trained and employed by your city's Senate, and by its forums. Your Financial Advisor can change the income tax rate upon your instructions.

Tax collectors take the money they gather back to the Senate or the forum that employs them. The money is stored in that building's vaults until the end of the year, when it is transferred to your main treasury. The money in these temporary vaults is included in your treasury's total and can be spent as if it were already in the treasury, but it is vulnerable to theft (see "Crime," page 59).

People are quite sensitive to the city's tar rate. High taxes might bring you more cash quickly, but they also put people in a bad mood and hence encourage them to emigrate. Low taxes, on the other hand, make memigrants, although they can make it hard for your city to pay its bills each month.

in each assignment, you'll figure out the best tax rate for your governing style. Remember this, though: You will rarely raise enough funds for a truly great city just by taxing your citizens. You are going to have to master industrial production and trade before your city can generate real wealth.

TRIBUTE

he tribute is a payment to Rome. Think of it as Rome's return on their investment in your new city.

It will be a happy day for your province when Caesar begins to take tribute from you, for then you will know that you are contributing to the advancement of the Empire! All of

Rome's provinces pay tribute, to contribute their share toward expanding and protecting the Empire, and to repay Rome's initial investment in opening up the new province

Caesar understands that some provinces can afford to pay more tribute than others, and he takes many factors into account when calculating how much tribute is due. The more profitable and advanced your city is, the more tribute your Emperor expects it to pay.

You can't affect the amount of tribute that Caesar charges your treasury, nor can you refuse to pay it. Tribute is collected once a year, and the Emperor expects your treasury to have the denarii on hand when the bill comes due. Inability to pay tribute lowers your Favor rating.

YOUR RANK AND SALARY

aesar permits governors to pay themselves a monthly salary from their province's revenues. Rome gives your province a sum of money to begin a new city, and sometimes offers cash bailouts or credits. It also automatically pays you a modest wage. This allows you to accumulate wealth outside of your city's treasury. Your personal savings travel with you from one assignment to the next.

You always hold a rank in the Empire. When you successfully complete an assignment, Caesar usually promotes you to a higher rank. Higher ranks merit higher salaries. You can pay yourself any salary that you think your city can afford, but you will automatically be paid the salary appropriate to your

mank. Paying yourself a salary above your mank might anger important people in Rome.

fersonal wealth can come in extremely handy.

sometimes, you might want to donate money from your personal savings to your city's treasury. A couple of hundred denarii from your own pocket can be a wise investment in your city's future, if it prevents you from incurring Rome's wrath by needing more funds from them.

Additionally, Caesar always welcomes gifts from his governors. Any time you decide to send Caesar money from your private account, you will rise in his Favor.

SCRIBE'S NOTE:

Gifts to the Emperor set a dangerous precedent. The more money you send Caesar, the more he grows to expect - and he might be insulted if your gifts don't grow in size. You can boost your Favor rating with gifts, sure. But unless you can sustain a pattern of giving, you might ultimately lose more Favor than you gain . . . not to mention the money!

GOVERNOR'S RESIDENCE

s the governor of a great city, you deserve to live in an appropriate style. You are authorized to spend city funds on a personal dwelling, and there are several to choose from, depending on how much money your city treasury can spare and how much land you want to take up.

Governor's House

Government, Administration and Money

108

Governor's Villa

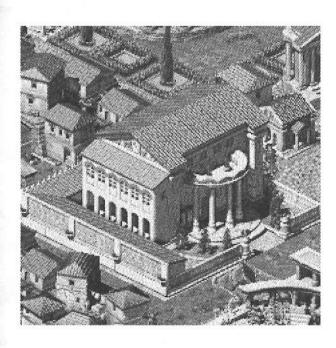

Governor's Palace

Government, Administration and Money

109

Your home is always one of the most attractive areas of the city, popular with all manner of social climbers. Like the Senate building the governor's residence is apt to inspire patricians to establish villas nearby. The larger and more expensive your house is, the more desirable it makes its surroundings. Unlike the Senate, though, a governor's residence does not conduct civic business and therefore needs no employees.

Food, Farming and Industry

FOOD

ood: Your people quite literally can't live without it. If you provide them with enough to live on, your citizens' mood will improve steadily. Should their rations fall short, though, their mood will rapidly deteriorate. This can lead to emigration and crime.

Tent dwellers are the only people who do not rely on city granaries to survive. These poor people like to scrounge a living from the land. Everyone else, though, depends on you to feed them.

You will usually have several ways of providing food: growing food on farms, importing it from other provinces, or fishing. Each province has its own natural resources, which determine what you can produce there.

You need to obtain food (usually by farming or importing), store it, and then distribute it. For details of how to import any good, including food, please see the chapter on Trade, which starts on Page 131.

People will eat wheat, fruit, vegetables, meat and fish. Meat and fish are both cut up and stored as steaks. Wheat is by far the most common food type, and is the most efficient to grow: a wheat farm can feed twice as many people as any other food farm. (In practice, this means that a wheat farm will grow and harvest its crop twice as fast as other farms).

Most people are quite content with a simple diet of one food type. In order for housing to evolve to some of its higher levels, though, inhabitants want more variety in their diet initially a second food type, and then, for even higher levels of housing, a third type.

One standard cart full of food contains 100 "units", each of which feeds two people for one month. A cartload of food, then, feeds 200 people for one month. If your city has 1,000 residents, it consumes five cartloads of food each month.

All food to be eaten is stored in granaries. As the granary fills up, its windows will fill up visually, so you can see at a glance how full each granary is. Your city can also store food in warehouses, but this will never be eaten directly. Any food at warehouses is deemed to be for export; farms only deliver their food to a warehouse if there is no working granary with space for the food.

Market traders make frequent trips to granaries to collect food. The market trader usually collects more food at the granary than she can carry herself, so a trail of granary boys helps her carry baskets of food back to the market.

Once a market has food, its traders go out delivering it to houses nearby. The market traders drop enough food to last each house several months, so long as their market has enough.

SCRIBE'S NOTE:

In case Pius hasn't made the point clearly enough, let me remind you: food distribution is fundamental to a successful city. Full bellies will go a very long way to keeping your citizens on your side.

It is very possible for your city to have enough food overall, but for it not to reach all your houses.

Use the food overlay to see if any houses are being missed by your market traders.

If you have a residential area some way from your farming district, you may well need a new granary to store food closer by your housing. Use the granary's special instructions to ensure that it maintains its own supply of food.

Remember that all food is distributed by markets; if some houses are requesting additional food types, make sure that a granary nearby has supplies of a second or third type of food. Again, use the granary's special instructions if you need to.

FARMING

ince you are unlikely to attract many people to your city without food, farming should be your top priority at the start of a new assignment (unless Rome is providing food for the province, which you will be told in the Assignment Briefing).

Not all land is fertile enough for farming. You can spot farmland by its yellow tufts in amongst more normal terrain; on the overview map (on your Control Panel) the fertile land is also yellow. You can build a farm anywhere there is space for it, so long as at least one square of it covers fertile land. This applies to all farms, including pig farms.

Some provinces have more farmland than others, but few have so much that you don't need to use it carefully. Treat farmland with respect, and don't build non-farm structures on it unless you really need to.

SCRIBE'S NOTE:

Identify farmland by yellow tufts of vegetation on the map. If you're not sure whether a particular patch of land is fertile or not, choose a farm from the building buttons and move your cursor over the map. The cursor displays a red diamond when it moves over land that you cannot build upon, and changes to a ghostly green image of the farm when it passes over fertile land.

Four types of farm produce food: wheat, vegetable, fruit and pig. Some provinces can also support olive or vine farms; these crops are not suitable for eating, but instead are used for making olive oil and wine (see Industry, on page 123, for more information).

Wheat Farm

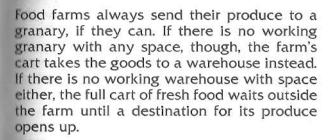

Wheat farms are twice as productive as the other food types. That is, a wheat farm will usually produce a cartload of food twice as quickly as any other farm. I say usually, since the cooler climate of some Northern provinces does not allow such generous yields.

Farms need employees to work, and road access. They will operate less efficiently if they have less staff than they need, and they won't operate at all with no staff. Once a farm starts operating, you will see its fields growing crops or raising animals. Once the crop is fully grown and ripe, the farm harvests it and puts the produce into a cart, which carries it off to a granary or warehouse.

Vegetable Farm

A farm cannot harvest its crops until the empty cart has returned from its last trip, since it has nowhere to store the harvested crops. This means that your farm production will fall if carts frequently have to make long lourneys, and this could mean that you end up having to build more farms than you really need. Planning where to build warehouses and granaries becomes very important.

No province enjoys the ideal climate for raising all four food types, so you probably will not be able to grow all of your population's food needs. Citizens don't consider that to be a good excuse for restricting their diets. Therefore, you will very probably have to import one or more types of food if you are to enable your citizens to reach higher levels of housing.

SCRIBE'S NOTE:

Farms need roads connecting them to their workforce and to their customers, and of course farms need maintenance by prefects and engineers.

Olive and vine farms deliver their crops to oil and wine workshops, respectively, if there are any, or to a warehouse if not.

Wheat, vegetable and pig farms are undesirable neighbors. Fruit, olive and vine farms, though, slightly increase the desirability of nearby housing.

Granary

Warehouse

STORAGE AND DISTRIBUTION: GRANARIES, WAREHOUSES & MARKETS

granary is merely a large structure that centrally stores the output of all of your food farms and fishing boats for later distribution. Did I really say "merely"? I certainly don't mean to belittle the importance of granaries! Without at least one, no one can eat. Your enemies know this as well as you do. Invaders often try to destroy granaries if they get past your city defenses. Rioters might do the same, especially if they're rioting because of lack of food.

A warehouse is a large structure that stores any goods at all: food, raw materials or manufactured goods. All imports are delivered to a warehouse (see trade on page 131 for more information), and all goods produced by workshops are automatically taken to a warehouse. The citizens working at warehouses are usually quite intelligent, and will realize when a workshop needs materials which are being stored at the warehouse; they will automatically send their cart with the materials to the workshop.

Warehouses and granaries are quite similar, in that they are both used to store produce. Granaries only store food, though they will store any type of food, not just wheat. Market traders seeking food for their customers can only get it from granaries, never from warehouses. If you have no food in a granary, markets cannot distribute food to your city's people.

Farms and fishing wharves always try to take their food to a granary, even if this means a longer journey than to a warehouse.

Merchants from foreign provinces visit your city's warehouses to see if there are any goods there which they can buy. They normally assume that anything stored at a warehouse is for sale. This lets you select a level of food storage with which you are comfortable, just by building as many granaries as you feel your city needs. If a granary becomes less than half full, a warehouse holding food automatically sends a cart of lood back to the granary.

One full granary holds 24 cartloads (2,400 units) of food, which feeds 4,800 people for one month. Knowing this lets you analyze your city's need for granary space rationally but intuition is a better guide. When your granaries are always nearly full and farm carts are standing idle, it's time to add a new granary.

SCRIBE'S NOTE:

Granaries and warehouses are undesirable neighbors. They need good road access to the farms, industries or merchants that supply them, and to the markets that distribute their goods. Like most buildings, they also need laborers and regular visits from prefects and engineers.

If a granary or warehouse can hire only half or fewer of the workers it needs, it only distributes the goods already stored there - it can't accept new deliveries. You can see how full a granary or warehouse is at a glance, or info-click on it to discover exactly what it holds.

Both buildings are animated when they are operating. If you don't see any activity, there must be a problem; info-click on them to find out what's wrong.

If a granary is destroyed, cart pushers who were walking toward it will instead seek the next-closest granary or warehouse. If there is no alternate destination, the cart pushers stop in their tracks until one becomes available. They might even wait amid the old granary's rubble. Cart pushers bound for a destroyed warehouse behave the same way, except that if they're carrying raw materials they'll consider delivering them to a workshop.

SPECIAL ORDERS

ranaries and warehouses are set up to work with very little intervention from you, so that you can spend your time on more pressing matters.

However, there may be times when you wish to take more control of your goods. You might want to store a large quantity of one good in order to send it to the Emperor, for example, or you may wish to ensure that a granary near an important housing area receives a regular supply of food even though it is a long way from your farms.

You can issue special instructions to any warehouse or granary to take this sort of control. Info-click on a granary or warehouse to access the Special Orders button, which lets you manage the flow of food and goods. Most of these special orders relate only to the goods that you specify.

When you click this button, you see a list of the commodities that the structure trades in. After each item, there's a button that looks like a balance scale. Click the balance button to choose one of these three options:

"Accept goods" is the building's natural

modition. When the word in front of the balance button says "Accepting," it means that the granary or warehouse is taking deliveries of that particular good normally. It also ships that commodity out normally. This effectively means that no special orders affect that good.

- "Refuse goods" tells the warehouse or tranary not to accept any future deliveries of that commodity. When you order the building to refuse something, the words "Not accepting" appear in front of the balance button, along with a big "X". A structure with orders to refuse something still ships its inventory out normally. This lets you keep goods only in the places where you want them to be.
- "Getting food" (available only in granarles) tells the granary's cart pusher to find the nearest granary that has this food type stored, and take some of the food back to his own granary. The cart pusher can't "get" food from another granary that has the same "get" order, nor can he get food from a warehouse. He uses a heavy-duty cart that can hold up to eight normal cartloads of food for this duty. Use this order to fill granaries that are far from the farms
- "Getting goods" applies only to warehouses, and works much like "Getting food" does for granaries. The warehouse tries to maintain between four and eight cartloads of the particular commodity in stock. If it falls below this level, it sends its own cart pusher to the nearest warehouse that has that commodity stored. The cart pusher can't get moods from other warehouses with the same get" order, nor can he take food from gra-

naries. He uses a heavy-duty cart that can carry up to four normal cartloads of the designated good.

When a warehouse is set to "getting goods" its cart pusher is almost always busy trying to maintain the desired level. Don't use this warehouse to also distribute imported raw materials to workshops, or to distribute imported food to granaries. The cart pusher does his best to fit all of those duties into his schedule, but he soon becomes quite harried and can't do a very good job at any of his many tasks.

A granary set to "get" food, or a warehouse trying to "get" goods, accepts deliveries of those commodities from other cart pushers normally, and releases its stores to buyers normally.

The panel that appears when you info-click on a granary or warehouse also has a button marked "Empty". This orders the structure not to accept any more goods, and to try to send whatever is stored there elsewhere. Of course, your city needs empty space in other storage facilities to accept the contents of the structure that you ordered to empty, and the building can only empty as fast as its car pusher can remove its contents.

Warehouses have another button marked "Make Trade Center." A warehouse designated as a trade center is the preferred destination for merchants to unload their imports. If your trade center is full or isn't working, merchants take their goods to the working warehouse with empty space that's closest to your trade center. The city can only have one

hade center at a time, so telling a new warehouse to become the trade center automatically cancels the status of the warehouse that previously held that distinction. The first warehouse you build in a new city automatically becomes the trade center.

One last special instruction is at your disposal. You can tell your whole city to "Stockpile" a good, meaning that you will neither distribute it through your markets nor export it. This is especially useful when Caesar requests a shipment of some good. To issue this order, visit your Trade Advisor, click on the relevant good, then click the "Stockpile" button.

SCRIBE'S NOTE:

It can take quite a long time for a worker to haul everything away from a structure with "Empty" orders, especially if the nearest storage facility with vacant space is on the other side of town. If the worker can't find any empty warehouse space to receive the goods, he will stand there with a full cart until some space opens up somewhere. A structure with orders to empty will sell or distribute its contents normally.

MARKET

ranaries bursting with food, and warehouses bulging with commodities, are useless without markets to listribute them throughout the neighborhoods. Only tent-dwellers can live without market access, because they forage for their

Housing never evolves very far without market access. Incorporate a market into any neighborhood that you expect to contain nicer homes. Beware of placing markets too near your best areas, because people have funny attitudes toward them. Everyone wants the services that a market renders, but no one wants to live next door to one. Traffic and noise make markets undesirable neighbors when they're too close by. Citizens want the convenience of nearby shopping without the annoyance of living in a commercial area.

Markets employ two types of worker Buyers, who walk from the market to nearby warehouses and granaries to obtain goods for resale, and sellers, who peddle these same goods throughout the city. A market should be near the neighborhoods that will form its customers. Sellers can only carry so much with them before they run out of goods and need return to the market for more.

As your city's houses evolve, some will begin to request more products than just food. Initially, they will want pottery, then furniture, olive oil, a more varied diet, and wine. When a house is held back just by the lack of one of these items, it tells its market trader that it wants the good. The market then sends its buyer out to get it from a city warehouse, if possible. Once the buyer brings supplies of the item back to her market, the seller can supply it to only those houses that need it.

SCRIBE'S NOTE:

Market buyers and sellers look identical, and you need not distinguish between them. When you first build a new market, the buyer

and the seller appear to walk randomly until they have something to do, but they soon sort out their roles and perform them without intervention from you.

The buyer looks for a nearby granary with food. Once she finds it, he will travel between the granary and her market to keep the market supplied. The seller walks through all the residential areas that he can reach, asking the customers on her route what they desire. The returns to the market and loads up on those goods that the buyer was able to obtain, and then walks a route to distribute them. When the seller's customers start requesting goods other than food, the buyer looks for a nearby warehouse that supplies them.

All of this buying and selling takes place as private transactions, with no effect on your treasury.

Markets distribute wheat, meat, fruit, vegetables, wine, oil and furniture, assuming that those are all available from a granary or warehouse. Busy markets evolve as time goes on.

INDUSTRY

aw materials are resources which can be processed into something more valuable. You can export the raw material itself if you have an appropriate made route open for it, but the raw material mot worth as much as the product that can made from it.

Ivery industry has two steps: obtaining the aw materials, and processing them. Workers may materials plants produce large quantities of their resource. Turning raw materials into finished products is done at workshops, and is more labor-intensive. Each raw material facility produces enough to keep two workshops busy.

Each raw material can be processed into a product as follows:

Olives	Olive oil
Grapes	Wine
Clay	Pottery
Timber	Furniture
Iron ore	Weapons

No province can mine or generate all these raw materials, but all have some. Sometimes you will be able to import a raw material even if you cannot generate it within the province. Wherever you have access to a raw material, you will also be able to build the appropriate workshop to convert it into a product.

When a raw material facility has generated one cart load of material, it sends a worker with the cart to an appropriate workshop, if one exists, and if not, to the nearest operating warehouse with space.

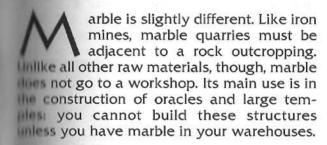

CLAY PIT, IRON MINE AND

lay pits must be established close to a body of water. Their work force dig clay for conversion to pottery. Iron mines can only be sunk near rock outcroppings; their workers mine iron to make into weapons. Timber yards need to be near a stand of trees, and their output is used to make furniture.

All of these raw material facilities need nearby source of workers, and easy road

to the appropriate workshop. They all undesirable neighbors for housing.

MARBLE

that doesn't mean that marble is useless part from these buildings. Although it cannot be processed into anything else, architural-grade marble is a valuable commodify. Few provinces can quarry marble, and it widely demanded throughout the Empire. If your city is lucky enough to be able to attact marble from the rocks, you probably have an easy source of high export income.

WORKSHOPS

he work done in workshops is more skilled than that in raw material facilities, and requires a lot more time.

Thus, a raw material generator working at capacity will produce two carts full of materials in the time that a workshop produces just one cartload of finished goods.

will always see some visual signs of tivity at workshops that have both imployees and raw materials. If workshops took idle, they lack one or the other.

finduction of finished goods always works have way. Raw materials are extracted

Marble Quarry

Clay Pit

or harvested, then taken to a waiting work shop. When the workshop finishes producing a load, a worker emerges and wheels the completed goods to the nearest warehouse that has space available.

SCRIBE'S NOTE:

Workshops can store some extra raw materials on their grounds, which helps to even out their production. Like most industries, workshops make undesirable neighbors. They need good road access to their workforce, to the raw material producer that supplies them, and to the warehouse that takes their output.

OIL, POTTERY AND FURNITURE

Pottery Workshop

hen oil workshops receive olives from an olive farm, they make oll Clay pits take clay to pottery workshops, which produce pottery. Timber yards send their output to furniture workshops, which of course make furniture.

Oil, pottery and furniture all have two uses You can export them for a profit, or hold onto them for local distribution through a market

Your own citizens need pottery, oil and furniture before they will build really nice housing. Neighborhoods just stop improving until their residents can obtain these commodities from a nearby market. If your province can produce pottery, oil and furniture, you will have to import them before housing can evolve to its full potential.

WINE

ake wine like any other processed good. Farmers bring grapes from a vines farm to a wine workshop. Wine is a valuable export commodity and a mood thing to have in one's warehouses. It has a special role for your own people, too.

Hebes are not allowed to drink wine as part of their normal diet. Wine is restricted to patricians, who consider it such a necessity that they will not establish villas in your city unless it is available.

To see the most expensive villas, you need among other things) to provide at least two types of wine, one of which must be imported. Regardless of whether they were grown locally or imported, grapes processed in your own wine workshops are considered to make domestic wine. Discerning patricians demand that at least one wine be imported as a finished product. You can satisfy their demands with wines imported from two different sources if your city doesn't produce any locally.

Vine Farm

Wine Workshop

SCRIBE'S NOTE:

You don't need to keep track of how different types of wine are distributed. As long as you get wine from at least two different sources only one of which may be local - markets automatically balance the vintages. As long as a particular market has wine to sell, and your tily has two different sources of wine, then that market has two variaties.

Furniture Workshop

If wine were always forbidden to plebes, none would want to live in the provinces. They drink as much as you allow them to have on special holidays. In fact, you can't hold a Grand Festival unless your warehouses hold enough wine to supply everyone in the city. The wine is automatically removed from your warehouses on the festival day.

WEAPONS

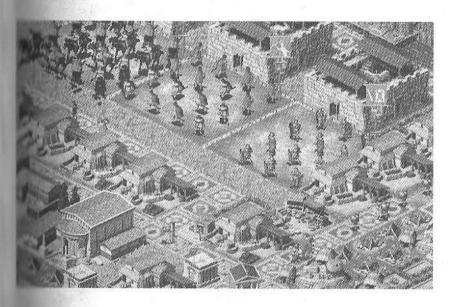

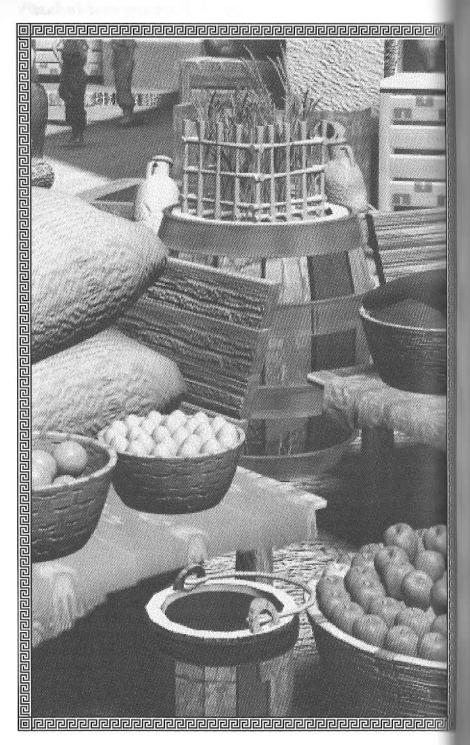

roduce weapons the same way you make any other commodity. Open iron mines to get raw material for weapon workshops, which take their finished goods to warehouses.

Ordinary citizens don't demand weapons nor would you want to supply them if they did! Weapons are often most valuable as exports.

If you wish to build a fort and train legionaries, you will need weapons: each solder requires one cartload of weapons. The weapons are taken to barracks, where the recruits are trained how to use them Auxiliary troops, though, do not require weapons; they make do with whatever they can find themselves.

rade is the main activity of the Roman Empire, and its profits are arguably the biggest reason for our many con-

four province doesn't exist in isolation. Healdents of other cities throughout the impire have the same desires as do your own citizens. You can make a lot of money welling them the goods that your farms and industries produce, and keep your own illzens happy by buying goods which they lessre but which your own province does not produce itself.

o start trading, you first need to open a made route. Go to your Empire Map, and lick on one of the cities near your own. Those which are happy to trade with you will sell you what goods they would like to buy or will. It costs some money to open any trade mute. Some trade routes are over land, while where use the sea. The route appears on the impire Map after you open it, and you will wable to see whether it crosses land or sea.

When you click a city on the Empire Map to be which goods a foreign city will trade with you, you also see a number of baskets next to each commodity. These indicate how much trade the city is willing to do in each good during any given year. One basket displayed above a good indicates a small supply (about 15 cartloads per year), two baskets mean medium (about 25 carts per year), and three signify a strong supply (40 carts mually). If a city has a large surplus of wine, but only a small surplus of pottery, for example, it will sell you more wine than pottery.

These amounts represent annual quantitle. After you sell a city its limit of a good, it will not buy any more from you until the next calendar year. These levels of supply and demand remain fairly constant. A message will notify you if they change, which they do from time to time.

may tell him only to sell any cartloads of good over a level you are comfortable with. This protects your own city's needs.

mouts of a good, he decides, without your mout, how much should be allowed to accumulate in the city's warehouses. He tries to move the you from bankrupting your treasury paying for unlimited imports, while allowenge enough to keep the city's industries withing without interruption.

Imported goods are delivered to your made center, when possible. The trade center simply the warehouse that you designate such (the first warehouse you build is automatically the trade center. To give a different warehouse that distinction, select the frade Center special instruction from its infolick panel). A city can have only one trade enter, so appointing a new one automatically changes the status of the previous one.

SCRIBE'S NOTE:

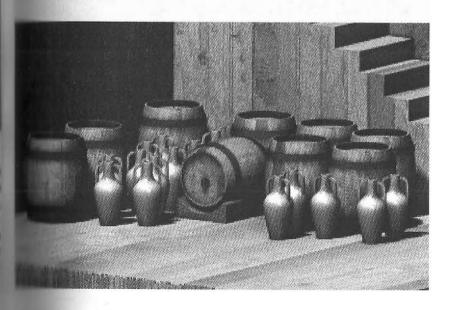

Click the Empire Map button. Your city flies a golden eagle on a black background. Trading cities have red flags. Other cities are not interested in trading with you; ignore them.

Click on any city with a red trade flag. Under the city's name, you'll see what it will buy, and what you can import from it. Click on all available trading cities and study your options. You'd like to find a trading partner that will buy everything that you can produce, although you're not likely to be so lucky. Look for a city that will buy commodities that you're already producing.

When you've decided which city to trade with, click the button that shows the trade route's price. The cost of opening the route is deducted from your treasury.

Trade by sea is impossible without docks, which you should build on the coast of your active river (the one with the flotsam floating downstream). You don't have to build trade ships. Private merchants provide the transportation. All you need do is provide a dock, without any low bridges blocking ship passage downstream of it.

No trade actually takes place until you instruct your Trade Advisor which goods you are willing to buy or sell. If you don't do this some merchants might leave your city with out supplies of some basic essentials! You can instruct your Trade Advisor to simple allow any exports of a good, or if you prefer

If your trade center is full, or if a merchant wants to deliver a good that your trade center has been given special instructions not to accept, imports are taken to the warehouse with space closest to the trade center.

Once a trade route is open, merchant boats or caravans pass through your province. If you have goods for export stored in a ware house, a land merchant stops at the ware house to buy the goods. As the goods disappear from the warehouse, you can see you city's cash balance rise; very rewarding! Sea merchants work quite similarly, except that they land at your dock, then send the dock's cart pushers over to collect the goods from the relevant warehouse.

Land caravans can carry up to eight cart loads of trade goods. Ships have room in their holds for 12 cartloads.

SCRIBE'S NOTE:

Go to your Trade Advisor (you can visit him automatically when you open a new route). Click on the commodity you want to export. Its panel has a button that says "not trading." Click that button, and it says "Export goods over 0." That means your warehouses will sell their entire inventory. To keep some of that commodity for your own markets, use the arrow button to choose a quantity. If you change "0" to "2," then your warehouses try to keep two cart loads in stock for your market buyers.

Trade can move in two directions. The same caravans or trading ships that come to collect your city's exports can also delive imports. You might need to buy marble, for example, so that you can build oracles.

want to import the ones that you lack. We are might ask you to supply something you normally wouldn't produce; if he equests weapons, for instance, and your province has no iron mines, you'll want to import iron so that you can make weapons satisfy the Emperor.

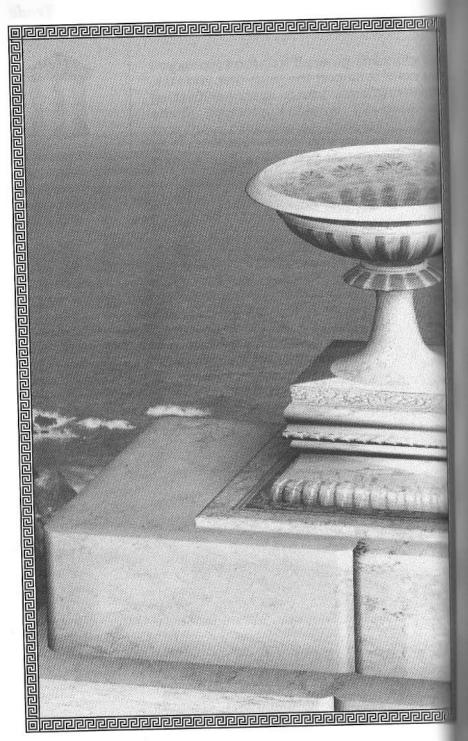

CRIBE'S NOTE

to import goods, click the same button you used to set exports. If the commodity is available for import, the button text now reads "importing." You can't simultaneously import and export the same commodity.

four treasury pays for imports when they arrive at a warehouse, and receives payment for exports when they leave the warehouse. For suborne routes, payments are made when goods arrive at or depart from the docks.

Water Supply

ome's innovative distribution system for fresh drinking water is admired and copied throughout the civilized world. The only building in your city that it tually needs water to function is the bathwise. People can survive by drawing water lirectly from nearby lakes and rivers. They will never build very nice homes, though, miless you supply clean drinking water to the city's nicer neighborhoods.

All water-related buildings and structures are inique in that, even where they require abor, they do not need road access. The water protects them from fire, and they are will well enough that they will not collapse the to a lack of engineering maintenance. Note that the bath-house, although it uses water, is not a water dispenser, and absolutely needs road access, and prefect and engineer maintenance.

WELL

well provides access to the fresh water deep underground, which allows people to collect water much loser to their homes, thus avoiding the long miney to the river or lake. Wells thus please lizens enough to allow some small inprovement to housing very nearby. Infortunately, wells still involve quite a bit of work, hauling pails of water up from the lattom, so inhabitants of modest housing or letter will not put up with just a well.

advantages to wells are that they may built anywhere, and they are quite cheap. You are creating a housing area purely to

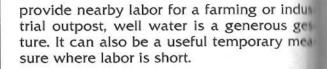

Well

Fountain

Wells have a small negative effect on the desirability of the area around them.

FOUNTAIN

here you want citizens to upgrade their homes into rather nlow dwellings, provide them with access to fresh water from a fountain.

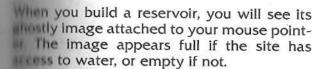

Fountains receive their sweet water from reservoirs. Reservoirs automatically come with underground pipes surrounding them and fountains have to be built within a reservoir's pipe area to be supplied with water.

Fountains supply a reasonably large area around them with their water. They don't affect the desirability of their surrounding area.

RESERVOIR AND AQUEDUCT

eservoirs are large structures, which store water for use by cities.

A reservoir next to a water source, like a lake or a river, visibly fills with water so long as has enough labor. New reservoirs come will a network of underground pipes that bath houses and fountains both need. By them selves, reservoirs don't slake anyone's thirst they merely feed water into the pipes that surround them.

Impecially in larger cities, you will often need m provide fountains and bath-houses far the province's lake or river. To move water far inland, build one of Rome's finest engineering achievements: the aqueduct. Aqueducts are long, open pipes which use maylty to carry water from a reservoir that a water supply to a second reservoir which does not. You can link several resertogether with a chain of aqueducts if you need to. Aqueducts can twist and turn as much as necessary to follow the land's conmurs and fit your city plan. They can interand cross one another, and roads can mas under them. There is no limit on an aqueduct's length.

wer the desirability of nearby homes. Aqueducts are comparatively graceful and limit affect desirability. Neither structure labor or road access.

Aquaduci

SCRIBE'S NOTE:

the Water Overlay to see a reservoir's pipe access, which looks he a concrete grid. You can build fountains and bath-houses anyhere within this grid. A blue shaded area surrounds functioning alls and fountains. Housing built within the shaded area has access that water type. Expect a slight delay between building a new her structure and seeing it on the Water Overlay. Your Labor

Reservoir

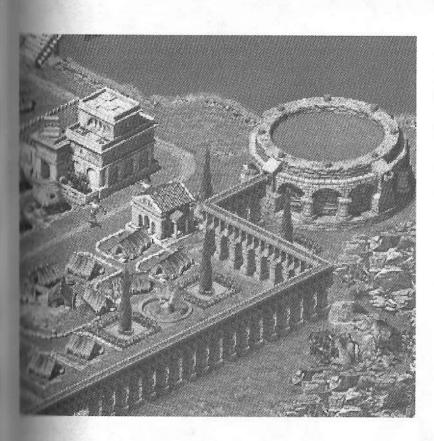

Advisor has to recruit new water workers before the fountains can supply water.

Use either of these two methods to link a second reservoir to your first one:

• Choose "Aqueduct" from the water buildings button and actually build it one segment at a time, or click and drag as you would a road. Then build a reservoir at the end of your new aqueduct. The aqueduct has to attach to the points in the middle of one of the reservoir's sides.

Or, choose reservoir from the water buildings button, then click on the original reservoir and drag your cursor to the spot where you'd like to build a second one. An aqueduct stretches between the first reservoir and the ghosted one attached to your cursor. This aqueduct tries to follow a straight line between the original and new reservoirs, curving around any obstacles. Release the mouse button to build the new reservoir and its connecting aqueduct.

Military Activity

noticed your look of disappointment when I told you that one of Caesar's measures of success is a Peace rating. Your family's long history of military genius well known in Rome. Your father and mandfather both have triumphal arches on the Via Sacra, but you won't find any lavish monuments to capable governors there. How an you attain comparable glory, when your concerns revolve around such everyday things as roads and granaries?

fou have chosen a career as a governor, not a general, so you will not embark on campaigns of conquest. Only the Emperor can make foreign policy. If you tried to order your begions into action outside your province, assar would consider that an act of civil war - if your centurions would even obey such an order. You have no authority to start wars.

However, Caesar knows only too well that you cannot avoid conflict entirely. Cometimes, your duty to protect your citiens from violence might require you to command legions of soldiers to defend your movince. Your authority to defend yourself is mile broad.

have some control over your level of military involvement when Caesar lets you hoose assignments. Usually, you are offered more dangerous" or a "more peaceful" mivince. If you want to follow in your foremars' martial footsteps, choose the more langerous option.

Wall

Tower

WALLS & TOWERS

he easiest way to keep enemies away is to enclose your city in walls. Not even fine Roman walls, built of earth and stone, are immune to attack. A determined enemy will eventually break through even the best wall. But walls can be built at thick as you have the money and space for and thick walls can take a very long time to penetrate.

Even a thin wall, easily battered down by a determined enemy, delays invaders from swarming into your town, or persuades them to attack a different location, which might lead them to a less important part of your city.

But walls are rarely built alone. Most cities place towers at regular intervals along their walls. Each tower can employ guards to patrol the walls, launching a volley of javelins towards any enemy who dares come within range. The guards also man a "ballista," -a powerful catapult-like machine that fires heavy arrows - situated on top of each tower. A ballista is powerful, and extremely useful for taking out attacking elephants of chariots.

The guards must be trained at a barracking before they report for duty. Once they arrive at a tower, they man its ballista and patrol the walls, assuming that the walls are two (more) segments thick. A single-thickness wall gives guards no space to walk along.

Tower guards won't abandon the cityl defensive works even if invaders breakthrough the walls.

Although walls need neither road access nor maintenance, towers do need road access so the guards can find their way there swiftly.

SCRIBE'S NOTE:

You can build walls one segment at a time, or create large sections of wall all at once. Click on the map where you want the wall to begin, then, holding down the left mouse button, "drag" the wall to its end, just as you would do with a road or aqueduct. Watch the cost: it can mount quite rapidly,

If an assignment is in a somewhat dangerous province, reserve space around the city's edge for walls, even if you don't actually build them right away. Land is seldom so scarce that you need to build right up to the border of your province.

lowers can never be free-standing; they must be built on top of walls that are at least two segments thick and two segments long.

You do not need to issue orders to tower guards, who are trained to light automatically when needed.

he careful, when building walls, not to cut off any part of your city from the road to Rome. Housing in particular must always be able to trace a route to the map's entry and exit points. If you wall a neighharhood off from the rest of the Empire, all of the isolated housing will disappear after a few seconds.

GATEHOUSE

ou can build a pretty impressive defense with walls and towers. Unfortunately, from the military viewment anyway, Roman citizens and traders prect freedom in their comings and goings. That means that you have to provide opening in your defenses.

Gatehouse

Now, these doors can be as simple as leaving a gap in the wall. Of course, when invaded see these openings, they will probably concentrate their attacks there. More common ly, governors build gatehouses at all of the city's entry and exit points.

Gatehouses are strong, protected by several sets of thick doors and walls, and are unlikely to be the subject of direct attacks them selves. Gatehouses confer one very useful benefit unrelated to their defensive role Citizens don't like to venture outside the city itself unless they have to, so most stop and turn around when they reach a gatehouse The only people who will venture into the wilds of your outer province are merchants migrants, and friendly soldiers following orders.

SCRIBE'S NOTE:

Your city must have at least one entrance, and one exit. Leave openings, ideally where the path through your province that was there when you first arrived runs through your city. This is the route merchants and immigrants like to use.

FORT

hen an enemy force is small of primitive, walls and towers might be enough to repel the invasion. But it would be foolish to rely solely on wall and towers if you face a real threat of invasion. Build forts to station legions around the province, far outside the city; these legions can patrol the area, and fight battles to prevent the invaders ever coming near the city.

Remember that people grow extremeuneasy if barbarians penetrate the city and lattroy even a single building.

mperors have been wary of their generals, and have frowned heavily on basing soldiers frome. In the outer provinces, this is natural anyway: Forts house legions to move mound the map and fight where they are meded, and this is much better done outside city than within. Additionally, citizens are marked by the danger of forts, and strong-dislike living near soldiers, with their marse behavior. Forts are best sited far outside the city walls.

province may have up to six forts. Each thouses one legion, consisting of a single legion type: Legionaries, the classic Roman leavy infantry; Auxiliaries, lightly armored loops armed with throwing pila (a deadly lightly armored, lightly armore

When the legion is at its fort, it can receive we recruits to replace any losses or bring it to full strength. All its troops gradually uperate health and gain morale while at lort. New soldiers are recruited from the working portion of your city's populable. Recruiting soldiers does not reduce your way.

line legion remains in its fort until you order to move elsewhere (see below, tommanding Legions," for more information).

Barracks

BARRACKS

he barracks is where new employees of both towers and military legions are trained to be soldiers. Each city can have just one barracks.

The barracks needs employees to work as trainers. Your Labor Advisor must assign labor to Military duty if guards are to man towers and walls, but soldiers will report to your forts regardless of his work orders. Barracks need road access and the usual maintenance services.

As soon as the barracks has labor, it can train recruits. When a new tower has labor access it requests guards from the barracks, which give priority to training wall guards over troops for your legions. Forts also request recruits as soon as they are built. Legionaries are the top-priority troop type to be delivered, followed by auxiliary infantry and the auxiliary cavalry.

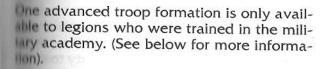

Legionaries, but not either type of auxiliary require one cart full of weapons per soldier to provide the heavy armor and weapons of critical to their power. When you build legionary fort, the barracks orders weapon from your warehouses. Legions contain the soldiers, but the barracks can train only one at a time, so it tries to keep four carts of weapons on hand to rapidly equip new legionaries. Few soldiers anywhere in the world can match a trained Roman legionary Experience has shown the value of being prepared!

It takes time to train new soldiers. When the barracks trains a new soldier, you will so

him make his way through your city to his post. Soldiers are trained, and graduate, individually, rather than waiting for the rest of helr unit.

MILITARY ACADEMY

military academy puts ordinary soldiers through a grueling program of advanced training. All soldiers (but wall guards) who graduate from the baracks attend the military academy, if one is sperating in your city. This prolongs their maining somewhat, but improves the quality the soldiers who graduate. The training is good that it has a 100 percent pass second.

vour city's enemies are just primitive bararians or weaker formal armies, normal baracks-trained troops are probably all you'll seed for victory. If there's a chance that you will face better equipped and organized enemies, give your soldiers the advantages of military academy training.

Military Academy

CRIBE'S NOTE:

both the barracks and the military academy are normal city buildings, needing road access, labor and regular maintenance. Forts, on the other hand, are so undesirable as neighbors that you need to keep them well away from the rest of your city. They need neither road nor labor.

COMMANDING ROMAN

ou can raise an army of legions consisting of three types of soldier:

Legionaries: Slow because of their strong armor and heavy weapons, these men make the best hand-to-hand fighters.

Auxiliary cavalry: With little armor, light swords, and no stirrups (which have not been invented yet), these soldiers are highly mobile, if somewhat more vulnerable and less deadly. Use them to shock and weaken enemy formations, and perhaps take on hos tile missile troops. Avoid enemy heavy infantry!

Auxiliary Infantry: With light armor and poor hand-to-hand combat skills, these troops rely on their speed and ability to strike from a distance. Their main use is throwing pila (deadly Roman javelins) at enemy lines inflicting casualties and reducing morals before they meet Roman lines.

There are only two orders you need to command your legions: Move to somewhere, or change formation.

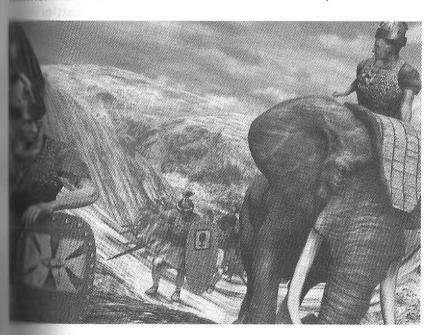

To order any legion to move, click on listandard. Your mouse pointer becomes a dagger. Click again on the destination you would like the legion to move to. Their standard jumps to that location, and the troops start marching there. Info-click directly on the legion to issue formation orders. You can also issue more strategic-level orders to your troops through your Military Advisor (see page 172).

Roman soldiers are trained in line and alumn formations, and you may also order must men to "mop up" any enemy, which can useful towards the end of a battle when here are just a few enemy stragglers left, attered around.

ines and columns can be either "close" or open," which describes how compact the immation is. A close formation is much imager, but covers less ground. An open immation disperses the same number of men over a larger area, reducing their immight somewhat.

Attacks on the flanks (sides), or especially the rear of a unit are much more deadly than head-on attacks, as you would expect. Wide the sof troops have considerable value, as it harder for an enemy to move around their lanks.

Legionaries - the Roman heavy infantry who graduate from the military academy learn to use a narrower, deeper "square" for mation, four men deep by four wide. This is stronger than the shallower formation although it obviously spans less width. It real advantage comes when the legion is under missile attack. The legion automatically assumes the Roman "tortoise" formation. The men face all sides and hold their shield out, edge to edge, making them almost invulnerable to missiles.

Roman soldiers are highly disciplined. They maintain their formation and stand their ground as long as their morale remains high If morale falls too low, a unit will scatter away from the front line. If its morale falls even further, the soldiers try to return to their fort, and will refuse to leave it until their morale recovers. Better-trained soldiers can keep their morale up longer, and nothing raises it quite like victory on the battlefield.

Strong discipline and formations are the historical key to the success of Rome's legions. Units in formation keep their standard taught and unmoving. As their morale falls and their formations weaken, their standard begins to flutter.

Our stronger enemies will try to break hole in our legions' lines, often using mounted charges to expose new flanks and our weak er rear. Beware larger animals and charlot the sight of one bearing down at high species is quite a shock to a soldier's morale, let me tell you! Only the strongest-willed stand the ground to resist such a charge.

WHAT TO EXPECT IN BATTLE

Imost all the battles you face will take place within your province. Occasionally, Caesar might request help of your legions in defeating some off enemy of Rome; without such instructions from the Emperor, your legions stay within the borders of your province.

WATTLES IN YOUR PROVINCE

hen invaders attack your province, they rapidly assess your military strength and devise a man of attack. If you have legions, organized nemy armies draw their troops up into formations, then advance against your men. The abble like Gauls, Celts or Goths just mass a crowd and charge your legions. Form the defensive lines in the enemy's patholickly, preferably far from the city walls: the prevent enemies from the city.

vou've garrisoned your forts with enough mality soldiers, and you use sensible tactics, you should win the day. Your legions will kill drive away all the invaders, then return to helr forts to replace their losses and restore strength. Victory in battle improves morale, making them that much linger for the next fight.

maders manage to sneak past your lines, our city's walls and towers are the next line defense. The enemy has to break through tower guards try to defeat them with mellins and ballista missiles. You are help-

less to affect the outcome of this conflict aside from cheering on your guards.

Once the enemy enters your city, you can order your soldiers to pursue them there, but they will have trouble maneuvering in for mation and will fight less effectively. If you have to order your legions into the city they've failed in their primary role of keeping the invaders at bay. Remember that wall guards are highly specialized soldiers, and have strict instructions not to leave the posts under any circumstances.

Even if the invaders defeat your legions and get past your walls, all is not quite loss Prefects aren't soldiers, and won't meet the enemy in any organized fashion, but neither will they go down without a fight. If you legions and tower guards weakened the enemy enough, city prefects might be able to finish the job.

Some of your other citizens might surprise you, too. Although they have no official responsibility to defend the city, gladiator and lion tamers aren't likely to stand by help lessly while barbarians destroy their home and businesses.

Everyone else is unarmed and defenseles Most citizens try to get away from invaden Those who can't - well, their best hope is to die quickly.

All invaders have their own objectives; might be food, money, the death of your people, or simply wanton destruction. Granarle warehouses and the senate building are frequently prime targets. The destruction the enemies can inflict is horrible, possible

to level your city and maybe even the end of your career. Prevent street that at all costs!

builders are not keen to work during or to a battle. When enemy soldiers are in province, immigrants wisely avoid your

CRIBE'S NOTE:

there's money in your city's treasury, you are not entirely helpless mainst invaders. If the treasury is empty, transfer your personal saving to the city. These are desperate times - don't be cheap now!

on cannot build new structures very near the fighting, but your binds are not entirely tied. Make sure towers have road access to abor. There is probably not time to build a new fort and recruit and ain more soldiers. Instead, beef up the city's internal defenses. build lots of new prefectures near where the enemy will gain access the city. Make sure that they have road access to labor. Tell your abor Advisor to make Military and Prefectures the top priorities.

IIGHTING FOR THE EMPIRE

Ithough your province occupies you fully during your time as governor, the Empire does not stand still.

There are fighting off invaders, or expanding the Empire's frontiers into new parts of barbarian world. Messengers will keep informed of any major changes.

military affairs outside your province.

The will request that you dispatch

of your legions to destroy an enemy

threatening some defenseless part of our Empire.

You are expected to meet with your Militar Advisor and order a group of legions to give win this victory for Rome. Caesar will give you any known intelligence regarding the size of the enemy, and you are well advise to consider that when deciding how strong force to send.

Your governance is much too important for you to leave your province, so you cannot accompany these troops on their travel. Once they leave your province, they are molonger under your direct control. You must trust the legions' own commanders Messengers will, however, keep track of your army's progress. You can also follow their progress on the Empire Map.

Should your men achieve their task for the glory of Rome, they will return, and you can expect to benefit handsomely from Caesar gratitude. Should they fail, you are unlikely see them again.

I should warn you that Caesar does not lookindly upon failure. Should you fail to dispatch any legions, he will be forced to lookelsewhere among his governors, and he will think quite badly of you. Withholding legion from the aid of another province simply land the Roman way. Should your legions lose the battle (and their lives!) Caesar will be a little grateful, but will also think you a fool.

INEMIES OF ROME

he barbarian mind is hard to understand. Why do they resist our civilizing influence? Even worse, why are bent on destroying our glorious cities? Inharians seem to have an innate need there because of their gods or their lack of lucation or their crude existences, we will know to destroy, to oppose that hich is noble and good that which is luman.

NATIVE TRIBES

ot all barbarians are equally hostile to us. Some tribes can even be civilized.

metimes, you will be sent to a province there one such tribe already lives. No one in predict how a particular group of barbarwill react to finding a new Roman setment in their vicinity, but Rome's long aperience with native peoples has established some general principles that will help

MISSION POST

hese natives usually get protective about the land around them. If you build on it, they might attack you. The legions are best not bothered with such actions, and their commanders will not limit instructions to slaughter the innocent. It would you be attacked, though, your solutions to be persuaded to fight these people.

need do is respect the boundaries of the natives consider to be "their" land.

One approach taken by some governors in try to persuade them of our good intention and show them that working with us is he ter than fighting against us. These government establish mission posts near the native lages. Such posts need labor and road access as with other buildings, but once staffed, the send out missionaries to teach these barba ians of our ways.

Reports suggest that this can work wonder WILDLIFE Some even say that a thriving and profital trade can be had with these people. But the trust is gained slowly, and is placed heavil in the missionaries they come to know Should they leave their posts, and not replaced, trouble could flare up.

CRIBE'S NOTE:

Use the Risks: Native Overlay to find the boundaries of a barbarian village.

OTHER ENEMIES OF ROME

tribes are the least of your worries. Some by sealth became wolf meat. barians have formed mighty nations the although obviously inferior to the Roman Empire, nonetheless pose serious challenge to our supremacy.

You will face organized armies at times some weak, to be sure, but some ill Hannibal's reputation goes before him, his Carthaginians are to be feared, for the

fine soldiers. The more Northerly mivinces usually present less organized but don't let that deceive you: they pride you would not believe, and some wexcellent fighters.

a dangerous world, my friend, and Rome plenty of enemies. Prepare well.

heep and zebras inhabit some of the Empire's central and desert regions. These timid beasts avoid contact with maple and the artifacts of civilization. whiten them away by building something their herds. Sometimes, they stubbornly to run off, and can get in the way of city plan. Soldiers can kill them if they ome too great a nuisance, but their meat not contribute to the city's food supply.

me northern regions are infested with Mives. Romulus and Remus owed their to a she-wolf, but these fierce animals www nothing of that and are fond of Roman They will probably prey on your people f isolated tribes of primitive natives were still your soldiers exterminate them or you the only barbarians in the world, Rome will them out of your city. Information, Tools & Tips

MESSAGES

he middle button on the bottom of the control panel (the one with a scroll on it) lets you read messages sent to you. When the button is black, you have no messages.

A brief fanfare sound while playing indicates that a message has arrived. Important messages are signalled by a more urgent fanfare, indicating that you should try to read them whenever you next have the chance to do Normal messages are announced by a very simple fanfare.

When a message arrives, your message buton lights up, and a small number appears
beside the button's scroll showing how many
messages you have. If you are busy with
other duties, don't worry about pouncing on
hese messages the instant they arrive: they
will wait until you can spare the attention.
lick on the button whenever you wish to
lick on the button whenever you wish to
lick on the button whenever you haven't read
at message, and you'll see a panel listing
all of your messages. Those you haven't read
thave a rolled-up scroll before the mesage title. After you read them, the symbol
hanges to an open scroll. Important mesages are listed in red

ome very urgent messages are displayed to you as soon as they arrive, without your licking the message button. These messages also go into your message box, marked as having been read, in case you want to refer back to them later.

When a message alerts you to some crisis, the a fire or a riot, you can click on the alarm

bell button (directly to the right of the measage button) to jump directly to the scene of the problem. If there are several problem areas, clicking on the button multiple time will cycle you through each trouble spot in turn. Many messages include a button right in the message itself that gives you that same option.

You can keep messages for as long as you'd like. To delete a message, click on it to select it, then info-click on it and it will vanish Deleted messages are gone forever, so only info-click on messages that you're sure you won't want to read again.

OVERLAYS

n overlay is a special view of your city. Caesar IIIs overlays let you watch a particular part of your city haction, and see how it interacts with its surroundings. Frequently they will flatten all buildings except for the ones you have chosen to look at, and will only show those buildings' people, to let you really see how the building or system is working.

Many overlays use color-coded pillars to indicate information: how likely is a building to catch fire or riot, for example. Dangerou or bad information will be colored in shade of red; the brighter the red, and the taller the pillar, the more serious the problem. Stone color is used for good or neutral information such as how much tax a building pays.

All the information has mouse help to explain its meaning, so if in doubt hold you mouse pointer over the item in question until the mouse help appears. (If you have turned

mouse help off, it will also be off for the overlay reports; use the partial setting to let you mouse help on overlays, but almost mowhere else.).

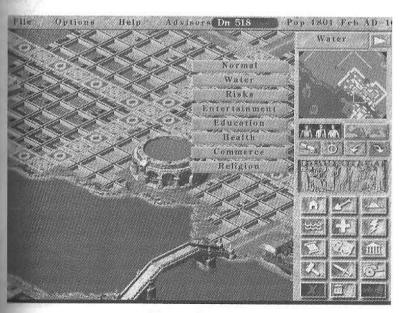

divides the overlays with the button at the op of your Control Panel. Whenever you are slewing an overlay, press the space bar to turn temporarily to the normal view. The sing the space bar again returns you to your selected overlay. Choose "Normal" from the Overlay button to return permanently to the normal view.

Note that time in the game continues to pass while you have an overlay on.

WATER OVERLAY

he Water overlay shows you which areas have access to water from fountains (shown in navy blue) and the

Water Overlay

area that pipes from reservoirs covers, which is extremely useful for siting new fountain and additional reservoirs.

Empty land that has pipe access is covered by a grid of grey stone channels. Building that have water appear as furrowed, pall blue squares; buildings that don't need water are plain tan squares. Fountain access appears as a blue tint radiating from the fountain.

RISKS OVERLAYS

se the Risks overlays often to speriod problems before they become crises Red is bad; the more red you see on a pillar, the worse the risk is.

Select Fire to see the city's prefectures and a of the prefects walking their routes. Building with tall columns on them have a high risk of fire. As prefects walk by buildings, you can

Taxes Overlay; typical of most overlays

the risk of fire column fall. Watch the matters of your prefects for a minute, and if they eventually pass by the buildings is the highest risk. If not, either redesign road network to allow better patrolling, build a new prefecture near the danger the Risks: Crime Overlay works similarly except that prefects cannot lower the of crime - they are shown because of important role in dealing with criminals and their handiwork.

Damage Overlay works the same way, mept that it shows engineers and engimer's posts instead of prefects and prefecmes. Buildings with tall columns are unstaand in imminent danger of collapse.

Problem Overlay is one of the most useof all. It shows only buildings that aren't mently working properly. Reasons for the moblem can include lack of road access, lack labor, lack of water, lack of raw materials lack of space to send their cart full of prolice. Scan this overlay once every few ame-months, just to see if your street-level wiews have missed any problems.

your province is home to any native peoles, the Risks overlay includes a report alled Natives. With this overlay selected, ou can see the land the barbarians consider be theirs.

INTERTAINMENT OVERLAYS

ith the Entertainment overlays selected, tall columns indicate good access. The Overall display housing's combined access to theams, amphitheaters, colosseums and the

hippodrome. It also displays all of the buildings and their performer suppliers: action colonies, gladiator schools and lion tames plus all citizens associated with those buildings.

If a particular neighborhood has a low over all entertainment rating, select overlays individual types of entertainment to which is holding it back. The theater overland shows theaters and actor colonies, plus the proper workers, with columns showling access levels to theaters. The amphitheau overlay shows amphitheaters, actor colonia and gladiator schools and their workers, will columns showing access to amphitheaten The colosseum overlay shows colosseum plus gladiator schools and lion tamers, and the proper workers and columns. The hipper drome overlay shows your hippodrome city can have only one) and chariotee school. Check each of these overlays in tull and watch their walkers circulate to which entertainment type is depressing the overall rating for a neighborhood.

EDUCATION OVERLAYS

he Education overlays work the same way as those for Entertainment Overall shows the combined accellevel to all three forms of education. School displays schools and their schoolchildren Library shows all of your libraries and the workers; Academy shows all academies and their workers. Use the individual overlays determine why a neighborhood's Overal overlay is lower than it could be.

IIIALTH OVERLAYS

The Health overlays work the same way as those for Education and Entertainment. Barber, Baths, Clinics Hospitals each show the relevant buildand their workers. Areas with poor to be to health facilities are more likely to lifer outbreaks of disease. Doctor's clinics the best disease prevention, and hospitals prevent or reduce the number of fatality when disease does break out.

COMMERCE OVERLAYS

ome of the Commerce overlays are slightly different than those described above.

Income is similar to the overlays for the building types. Selecting this display hows your Senate building and forums, plus of the tax collectors walking their routes. The column heights show how much money ach housing lot has paid in taxes so far this ear.

the Food Stocks overlay is also similar to hose for other building types; it shows the mations of your markets, market workers walking their routes, and columns indicating well of market access for every housing unit.

the Desirability overlay looks quite different nom other overlays. It rates each map quare's overall attractiveness to anyone onsidering living there. Cooler colors, like the and green, are raised slightly above mound level, and indicate highly desirable meas; warm colors like orange and red are unken below ground level, and indicate medesirable property. You want to build your

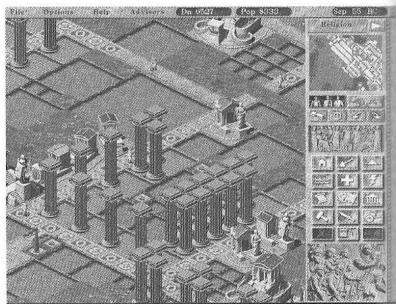

most valuable housing in the most desirable areas, but be careful: If you start razing other buildings to make way for housing, you will change the desirability calculations.

RELIGION OVERLAY

here is only one overlay for Religion and it works the same way as those for Entertainment, Education and Health. It shows all of your temples and oracles, plus all of their priests walking around your city. On the Religion Overlay, talk columns show access to more gods. Highlevels of housing need visits from the priest of several different gods.

Religion Overlay

ADVISORS

overning can be a lonely profession; it seems that everyone wants something from you and no one apprecimate the many conflicting priorities that you are not entirely on own. Ultimate power and responsibility your city are yours alone, but you do have alvisors to help. Often, you implement your liby issuing orders to your advisors. Visit hem by clicking the Advisors button on the ontrol Panel or by selecting them from the menu bar.

our Chief Advisor looks at all the information gathered by the other advisors, and summarizes key information for you, highlighting any critical in red. When you see a report in red, it is be helpful to visit that specific advisor more details.

It usually a good idea to consult your Chief advisor frequently (probably every month or wo) to see if you have missed anything apportant.

IABOR ADVISOR

Your Labor Advisor assigns plebes to various sectors of your city's economy. As long as you have enough workers to fill all of the city's open jobs, the bor Advisor doesn't need any instructions you. In times of labor shortage, though, an use this panel to tell your Labor dollars which jobs he should fill first.

Your city's labor force is split up into seven categories. These are shown, along with the number of workers currently assigned, and the number needed to operate at full capacity. At the bottom you can also see how many total workers are available.

miless you have already chosen a first and mond choice. If you chose Engineering as your top priority, for example, you would see that Engineering now has a padlock symbol and the number 1 in front of it, showing that it is locked in as your first priority.

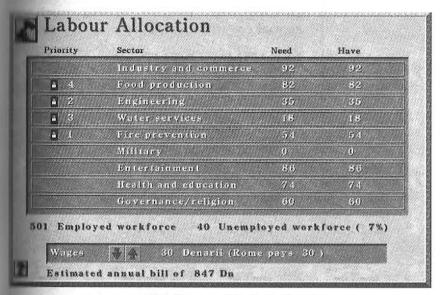

Employment	The city has unemployment of 7%
Finances	This year assets have fallen by 1890
Migration	People are immigrating to the city
Food stocks	Our food levels are low
Food consumption	We can a little more than we grow.
Military	
Crime	No problems reported
Health	Some citizens used both houses
Education	No problems reported
Religion	Most demands are for basic access
Entertainment	Most demands are for better access
City sentiment	People are pleased with you.

The Chief Advisor Panel

Unless you tell him otherwise, the Laboral Advisor assigns workers as he deems bear That won't always suit your priorities, especially if you have just received some requests from the Emperor or news of impending attack. You might find that you city is better off when some areas are working at full capacity, even if it means that other areas might barely function at all.

To change the priority of a category, click of the category name, and a small pane appears showing priority levels ranked from 1 to 9. Click on the number 1 to make it to priority, 2 to make it second priority, and so on. You cannot select third choice, say

The Labour Advisor Panel

four Labor Advisor will always assign workto your priorities in order, before assigning anyone left to the categories you have not given priorities as he thinks best.

To remove a category from the priority list, lick on it and choose "No priority" from the priority panel.

Your Labor Advisor's other main responsibility is paying all of the city's workers. You will always start out paying the same wage as is flered in Rome, but you can instruct your

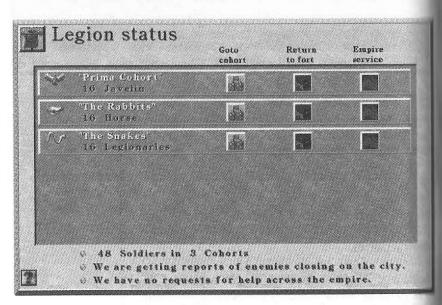

Labor Advisor to change this by clicking of the arrow buttons next to the display of the current wage.

As you would expect, the Labor Advisor keeps track of how many plebes are employed and unemployed, what your city unemployment rate is, and how much your annual cost for labor will be.

LEGION STATUS

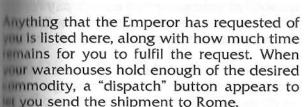

our Military Advisor has up-to-date information on all the legions in your army. Consult him to see which legions are strong and have high morale, and which are suffering. Your Military Advisor also implements your orders to dispatch legions in response to Caesar's requests.

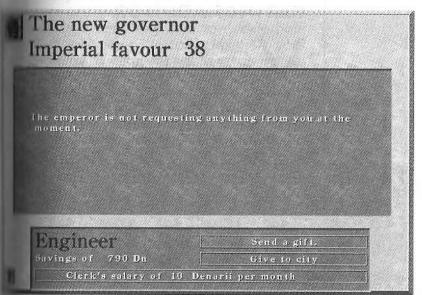

The Military Advisor Panel

IMPERIAL ADVISOR

onsult your Imperial Advisor to check your standing with Caesar, as expressed by your Favor rating.

The Imperial Advisor Panel

meath that message window you see your ank in the Empire, along with the balance in our personal savings account. Caesar addingly allows you to pay yourself a alary equal to your rank, although no one stop you from taking more or less than that, Click on the large button at the bottom

of this window to set your salary level. Jube warned that salaries higher than your ram warrants will not be popular in Rome.

The "Send a Gift" button lets you send Caessa a token of your esteem. You will pay for an gift that you decide to send the Emperor from your personal savings.

The "Give to City" button lets you transfer money from your personal savings to the city's treasury.

RATINGS ADVISOR

isit this advisor to see how well you are meeting the goals of your present assignment. Rankings for Culture Prosperity, Peace and Favor appear on the panel, shown as a pillar. The higher the pillar

The Ratings Advisor Panel

higher your rating. When a pillar has hed the level you have been set for that highment, it will be capped.

can also see the level you need for each miling, to complete your assignment. Click on my rating for brief advice on how you can improve it.

TRADE ADVISOR

our Trade Advisor is one of your most important aides; he doesn't have a lot to tell you, but he carries out all of trade orders. Visit him to decide how much, if any, of each commodity in your archouses to export, whether or not to port goods, and to turn industries on and

lick on any commodity listed for more aformation about your city's activity relating that good, or to change its trading status.

you have an open trade route for a particular commodity, you'll see a button marked lot trading" when you click on the good. lick that button repeatedly to cycle through possible trading options. Sometimes, you an only export that commodity or import it, pending on your trading routes. Other lines, again depending on your trading partitis, you can choose to either import or aport the commodity. You can never both apport and export the same commodity.

you have a trade route open which is keen sell you a commodity, clicking on the but-will show the word "Importing."

you have a trade route open which is willto buy a commodity from you, you will

see a button marked "Export over", will arrows that let you set a quantity. Leave it a 0 to export your entire inventory of the good or set an amount to keep in your warehouses, with anything above that then available for export.

Click this button repeatedly to cycle through all of your trade options for the particular commodity. You have to choose between importing and exporting any given good you can never do both.

During times of labor shortage, you might want to temporarily shut down industries that have built up surpluses, or that productive items you can do without for a short while. The workers who were employed at the industries you turned off become available for your Labor Advisor to reassign elsewhere Later, when more workers are available, you can quickly absorb surplus workers by telling

Trade advisor.

Click on an item to trade.

Show prices

The Trade Advisor Panel

Trade Advisor to turn the idled indus-

lick on the button marked "Show Prices" to the how much you receive for each cart load something that you export, or how much you pay for each cart that you import. Notice that it usually costs you more to import something than you make for exporting it. There is no profit in "playing the market" by importing goods from one province and apporting them to another.

by supply and demand throughout the mpire. You cannot change prices, although market forces in the rest of the Empire will ause them to vary from time to time. You will be notified of any change via a message.

POPULATION ADVISOR

our Population Advisor keeps track of your city's population over time, and presents his information on three maphs.

The first graph that you see, labelled Population - History," simply shows the total number of people in your city over time. The bar represents the population at the end of a month. If your city is growing, the bars hould rise pretty steadily from left to right.

lick the small window labelled "Society." The large graph changes to show your population's current composition by income. Low-income citizens are on the left, and rich citizens are on the right. When your city is new, most of your people are tent dwellers, and the highest bar will be well to the left side of

the graph. As time goes on and people's for tunes improve, the highest bar should shift gradually to the right. This is useful to try to ensure you are not creating an unequal soci ety with a few very wealthy people and mass of poor; such a social mix is bad for the city mood and could lead to crime. Try to have a more balanced social mix.

Click the window labelled "Census" to call use a graph showing your population's composition by age. This graph is useful for planning how many schools and academies you need, and seeing how many of your citizens are of working age. Also use it to predict how many citizens are about to retire, which can alter the economy of a city dramatically since retired people no longer work, yet the continue to consume food and other good and services.

The Financial Advisor Panel

so far this year, and, for comparison, hows the totals from last year. This report is specially valuable if you're having trouble alsing your Prosperity rating or simply want use how best to raise more money.

This is also the place to come if you want to hange the tax rate. Change the rate using the arrow buttons. The line showing the perentage of your populace registered for taxes is important, too; you'll usually want to the total temperature of the tax of the taxes, and thus to the tax of the taxes are not paying their taxes, and thus to the taxes of the taxes are not paying their taxes, and thus to the taxes of the taxes are not paying their taxes, and thus to the taxes of taxes are not paying their taxes, and thus to the taxes of taxes are not paying their taxes, and thus to the taxes of taxes are not paying their taxes.

INCOME:

- When your city is young, most of your income will probably be from taxes.
- As you establish industries and open trade routes, the line showing "trade receipts" will probably grow steadily larger Eventually, it should surpass tax income.
- Donations are either from your personal savings, or from Caesar if your treasury ran out of money and Rome provided rescur funds.

EXPENSES:

- Imports (from trade, including any wheat provided by Rome to feed your people);
- Wages, usually the city's biggest expense
- Construction. Remember, money spend on construction doesn't count against your Prosperity rating;
- Interest (if you've run your treasury into debt);
- Your personal salary; and
- "Sundries," a catch-all for expenses that don't fit any other category, like the cost of festivals or losses from theft.

The entry of greatest interest is probably the "Net in/out flow" line. This shows you, at a glance, how much your treasury is shrinking or growing.

MAME OPTIONS

n addition to all of the game reports and controls that *Caesar III* puts at your command, the program includes some features that let you customize the game to mur liking. These are all found on either the denu Bar or the Control Panel.

AVING THE GAME

To store the game you are currently playing, click on the "Save" option under the File menu, then follow the screen instructions. Name the file whatever you like so that you will remember it aslly. The "Load Game" option restarts a meviously saved game. All saved games are lored on your hard drive in the same folder which you installed the game.

It is a good idea to always save your game before exiting the program.

alled "Delete Game" is another menu item alled "Delete Game". Click this option, and our saved game list appears. Just click on the name of the save that you no longer want, then click on the check mark to permanently delete this save.

OPTIONS

Display Settings" offers you four different lews of Caesar III.

Caesar III starts as a "Full Screen" program, meaning that it takes up all of the display pace on your monitor. If you click Windowed," the game runs in a standard mogram window. Use this option if you want access to your computer's desktop while the tame is running. You can resize the game

window just like any other program window but Caesar III's graphics will not look the best if you do that.

Caesar III uses a lot of computing power and we don't recommend that you run other programs while you're playing the game Doing so can cause conflicts that will make the game run improperly.

The other choices under "Display Settings" by you define the resolution in which the game runs. At 640 by 480, everything looks by ger, but your screen shows a smaller section of the map; game speed will be somewhatester. At 1024 by 768, the opposite is true Everything looks smaller, your screen show more of the map, and the game runs more slowly. The 800 by 600 option is midway between these extremes.

You can't run *Caesar III* in windowed mode a resolution that is equal to or higher that your computer's desktop resolution. If you choose "Windowed" and "1024 by 768", we example, but your computer is set 800x600, the game will report "Unable to set windowed mode".

- "Sound Settings" lets you control the relative volume of Music, Speech, Sound Effect and City Sounds. Adjust the mix of sour elements to your liking, or turn them of completely.
- "Speed Settings" lets you control the rate at which time passes in *Caesar III.* Set an speed that you are comfortable playing.
- Difficulty" levels may be changed at an time. The "Money" table below includes the amounts of your starting cash, rescue from Caesar, and tax income. "Favor" and tax income.

Mood" list the starting values in new assignments.

Difficulty	Money	Favor	Mood
Very Easy	300%	70	80
fasy	200%	60	70
Normal	150%	50	60
Hard	100%	50	60
Very Hard	75%	40	50

levels also reduce the strength of wolves and enemy invaders.

- This same panel has a toggle for "God flects". Leave them on to suffer the consequences (and reap the benefits) of the gods' plnions of you. Turn them off to avoid blessings and curses. You can't banish the gods nilrely. They will still grow angry when they slighted, but they can't act on their rage hen this option is turned off. Temples are all needed to enable housing evolution and a increase your city's Culture rating.
- Pressing the "P" key on your keyboard auses the game. You can scroll around the map, but you can't build anything while time paused.

croll speed" affects the pace at which the map moves when you sweep the cursor to edge of the screen. You might prefer a lower scroll speed if you have an especially owerful computer.

Caesar III offers a lot of information about allow aspects of the game on-line, for easy elerence. Access some of it by info-clicking most buildings, then clicking on the information button. Alternatively, choose "Help"

from the menu bar to see the Table of Contents for all of Caesar III's in-game information.

Mouse help is the text that appears in white box when your mouse pointer however some part of the game. It is "ON" when you first play Caesar III. Turning it "OII makes it go away entirely. Choose "Partial" wenable mouse help for the Senate building and the Overlay maps, but nothing else Adjust this setting from the Help menu.

"Warnings" appear at the top of you map, reminding you that a building need road access, for example, or that the clineeds more workers. You can turn them of from the Help menu

OTHER GAME CONTROLS

he Control Panel on the right side of your screen has a few buttons that we haven't mentioned yet. The reference card that came with your game shows a diagram of the whole Control Panel and label all of these buttons.

The right-pointing arrow to the right of the Overlay button lets you hide the Control Panel to see more of the map. When the Control Panel is hidden, this button change to a left-pointing arrow; click it again to brim back the Control Panel.

The four small buttons beneath the large Advisors and Empire Map buttons let your review your present assignment, or change the orientation of the province map. The curved arrows pointing left and right rotate the map by 90 degrees in the corresponding

mection. The circle with an arrow pointing malght up returns the view to "due North," mich is the direction you started with.

the first button on the bottom row (with a "X" on it) lets you undo the last thing that did. You aren't allowed to undo every ingle action in the game, but you can usual-un-build whatever you last built. This abilitasts just for a short while after you have something - after that, the effects of wilding it have already changed the game much that it would be very complex to wravel.

the undo feature immediately after you wild something by accident. The button pears dark when you aren't allowed to ado anything, and "lights up" when you can ado your last act. If you build something in wrong place, or accidentally build the rong building, click "undo" to make the allding go away and refund its cost to your easury. Note that if you undo something hille time is paused, it will not go away until ou un-pause the game.

ANSWERS TO COMMON

Why are some of my roads paved, while others aren't?

Citizens pave roads when surrounding operty becomes sufficiently desirable.

How can I make land more desirable for ousing?

Approach this question from two direcuns: How can you make land more desir-

able, and how can you make it less undeal able? To make an area more desirable, bull Assuming that you haven't ordered your pleasant things like gardens, plazas, temple Advisor to turn them off, they probably statues, baths and theaters nearby. To make the laborers. Try building housing closer to it less undesirable, locate unpleasant structure tures like industrial and military building sign a higher priority to Industry and elsewhere.

Q: What do I need to make my city's hour Workers with full carts are just standing ing evolve higher?

A: Housing needs three things to evolve: (1) They would like to, but there is no place Access to many different types of services them to deliver their goods. Make sure (2) Various commodities, provided by may have free space in your warehouses and kets; and (3) Desirable location. Info-click on Manaries, and that they have enough a house to find out what's holding it back a imployees to function properly. any given time.

vacant housing lots?

A: One or more conditions are probable depressing the mood in your city. Him Most of the numbers you see for comunemployment, high taxes, low wages and modities are measured in cartloads. But each low food supplies all make people unhapped into ad contains 100 units of that commodand discourage immigration.

Q: I can't attract immigrants because I don't hole cartloads. However, citizens don't have enough food, but I can't get enough assume entire cartloads of a commodity at food because I can't attract immigrants! How time. When items go to a granary, a marcan I break this cycle?

A: Order your Labor Advisor to reassign the find: When you're looking at industry and workers that you do have. Make Food ade, you are dealing in full cartloads. When Production your number 1 priority for awhile su're looking at granaries, markets or hous-Don't skew these priorities for too long, you are dealing with units, and there are you risk fires and riots as workers are diversion 00 units in a cartload. Your concern will be ed from Engineering and Fire Prevention. A selfly with cartloads, and you'll rarely (if soon as you see immigrants arriving, return ver) have to pay attention to units. your priorities to normal.

Q: Why won't my farms or mines product anything?

Industries, or tell your Labor Advisor to mmerce.

mund. Why don't they get to work?

When I info-click on a granary, it says it Q: Why don't immigrants move into me in store 2400 food, but it doesn't hold anying like 2400 cartloads. What's going on these numbers?

> You usually don't have to pay any attenon to this, because trade deals only in or a home, they're converted into smallunits that people can use. Keep this rule in

Q: How come all of my water supply billings keep flashing on and off?

A: They need laborers. Consult your laborated Advisor. If the number of actual employin Water Services is less than the number equired, then your water workers are doubtheir best to spread water coverage throughout the city, but they can only do so spondically. Assign a higher priority to Water Services or increase your overall workform

Q: I need money! How do I get trade will ing?

A: First, use the Empire Map to open a trace route. Second, make sure you have a commodity your trade partners want stocked in warehouse. Third, tell your Trade Advisor export the commodity. Finally, if the roughou opened is a sea route, you must have functioning docks.

Q: My housing won't evolve because it can get pottery, but there's pottery in my wall house and the houses have market access What am I missing here?

A: Help the market get pottery from its cleest warehouse. If your pottery workshedon't deliver to this warehouse, set It "Getting" pottery with the Special Ordebutton. Its cart pusher will go to other warehouses to bring back a supply. Market buy will walk a long way to find a warehouse with pottery, but the market is likely to out of food while its buyer is on a long trip is better to let the warehouse's cart pushedo most of the walking.

Do goods spoil if they're stored in grailes and warehouses for a long time?

No. Only divine anger or criminal acts can have harm to your goods.

Is the Emperor deliberately asking me for mods that he knows I can't supply? Is there way to get him to ask me for things that we?

Caesar asks for what he wants, when he ants it. He doesn't care how hard or easy it for you to comply with his wishes, or how avenient it is for you to respond to his quests. He will, however, only ask you for ms it is possible for you to get him - even that means importing it.

Are the commodities that trading cities the Empire Map will deal in determined set conditions, or does supply and mand play a role?

Ivery province in the Empire has a unique of resources and capabilities, just as does are own province. Trading cities export ods that they can produce in quantity, and port goods that they lack, just as you must so, supply and demand play a role in that use, but the commodities that cities want have are predetermined by their climate of resources.

IINTS AND TIPS

ou can see by now that there is no single "winning formula" for success in *Caesar III.* There are as many paths victory as there are governors in the man Empire, and the one you take

depends entirely on what you enjoy and and good at.

If you have trouble making money or please ing the Emperor, some of these tips from other governors might make your job a lill easier. Of course, if they do not fit with your playing style, by all means ignore them.

URBAN PLANNING

- Keep the number of road intersections your city to a minimum, so that you can be ter predict the route that walking citizen will take.
- Spend some time in the early assign ments watching Overlay reports to learn how working citizens spread access to the buildings. Later assignments usually require your city layout to be very efficient, and you're more likely to succeed if you learn how citizens walk their routes in the earlier more forgiving assignments.
- to cross them repeatedly in the course of their workday -placing farms on the far bank of a river and granaries on the near, or materials industry on the far side of the river lains to cross the bridge. Better still, plan some house. housing near your industrial area so that workers need not commute across the MANAGING PEOPLE bridge.
- Whenever you build a new bridge remember that you are creating a breach l

the natural defense that the river offers. invaders will use the bridge to reach your My center. Do not build bridges that you annot defend.

- Turn fires and collapsed buildings into an apportunity for urban renewal. Instead of imply rebuilding whatever was destroyed, reevaluate the neighborhood that suffered damage. Would you be better off with a wider road or a new garden where that housing burned? Sometimes less density yields better quality.
- Develop a habit of building prefectures. ingineer's posts and other essential services at regular intervals between residential weas. Providing regular "service strips" like this ensures that your patrols will be evenly spaced, and that you won't forget to build some crucial structure.
- Try to build reservoirs exactly the right distance apart so that their pipe networks lust meet, without overlapping. To view a Do not place bridges where workers need reservoir's coverage, choose the Water Overlay.
- Only housing benefits from fountain putting a clay pit on one side and workshop access, so don't lay out a grid of fountains to on the other, are bad ideas. If you put a raw provide blanket coverage. Just place founto supply residential areas. put its workshops and warehouses there, to Overlapping coverage by multiple fountains so that only commuters and caravans have gives no additional benefit to a particular

A city with too many patricians won't have enough workers. Don't devote all of your effort to encouraging patrician villas. If you're too successful, your labor force might

shrink too quickly. Remember, patrician don't work. When you do see patrician villa replacing plebeian apartments, check in will your Labor Advisor. If you have a shortage of workers, create new low-income housing before lack of services makes the new villadevolve back to plebeian housing.

In times of labor shortage, tell your Trade Advisor to temporarily turn off any farms or industries that have built up surpluses. This frees up workers for other sectors with more immediate labor needs, and buys you some time to attract new immigrants. Don't forget to turn the industries back on when immigrants start to arrive!

FOOD, FARMING & INDUSTRY

- Almost all provinces have at least some farmland, but some won't have enough to support a large population. After you've placed all fertile land under the plow, you populace might well outgrow local food production. If so, and your population is not too large, you're best off growing specialty food locally, and importing wheat. That's because wheat is the cheapest commodity. Large populations should grow their wheat, since they will need such a large quantity of it that to import it might clog up trade.
- Make industry more efficient by central izing your industrial sectors. First, build the same type of raw material producers (clay pits, for example) close together. Second build the warehouse that will store the finished pottery fairly close, but on a main road Third, build the pottery workshops between your cluster of clay pits and the warehouse This minimizes the distance that cart pusher

have to travel and improves the efficiency of your whole pottery industry. Apply the same principle when you establish other industries, and try to avoid having them share the same main roads.

- A few buildings working at full capacity with a reliable labor supply will out-produce a larger number of buildings with unreliable labor. To ensure a steady supply of labor for your raw material producers, farms and other industrial buildings, create small housing communities near them. Don't worry about evolving these industrial tent cities very far or very quickly, but do be sure that you build plenty of prefectures near them, as their residents are likely to be in a perpetually bad mood.
- Learn how to use the Special Orders buton in your granaries and warehouses to pread goods evenly across your city.

TRADE

- Trade is the key to profitability. Check the impire Map early in your assignment to discover what your trading partners will buy, and develop that industry quickly. Once you're earning trade income, you can turn your attention to improving your ratings.
- Opening a new trade route always costs denarii, but the "lowest cost" isn't always the theapest trade route fee. If you need a customer for oil, for instance, and either Tarraco Syracusae will buy oil, notice that yracusae is a sea route, while Tarraco is probably a land route. If you haven't yet built docks, it might be cheaper to pay a couple of hundred extra denarii to trade with Tarraco

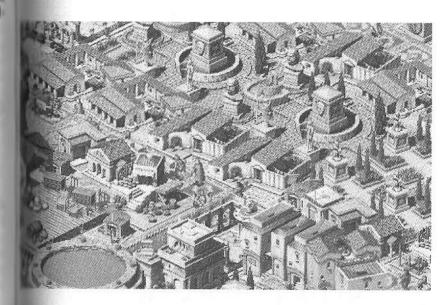

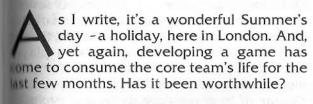

than it would be to build docks, a new ware house and roads to connect them so that you can open the "cheaper" route with Syracusas

- By the same reasoning, if you need in import food or commodities, it might be better to open one expensive trade route with a city that will both sell you imports and buy your exports, than to open separate (but cheaper) trade routes for exporting and importing.
- When you build docks, always build warehouse very close by to speed the loading and unloading of trade ships.

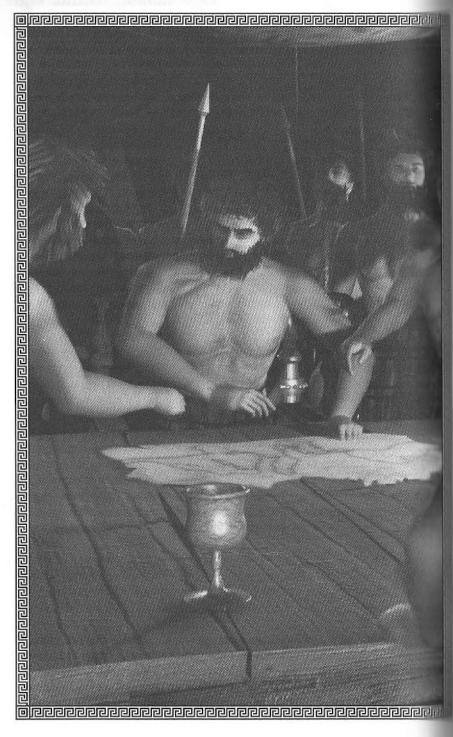

Designer's Notes

I should be the case that every game I lesign is better than those that have gone before. Together with the rest of the team, we had a chance to learn from feedback to revious products, and to play more games from other people also. But with *Caesar III*, I reel especially excited.

When we first began the project, we were omewhat nervous. Caesar II had been so well received that we didn't know quite where we could take it. To be sure, there were a host of sundry points that we had onsidered and discarded for Caesar II that we could add, but they certainly wouldn't amount to a new product.

we began working on "Caesar in Space," where new technology would allow us freeom to take the game in whole new direclons. Six months in, though, we returned to lome. There is something special about the entire Roman period, something special bout the congruence of elements which fit ogether beautifully to make a wonderfully ompelling game. Elements such as the core olor palette, simple and seemingly innocuous, but somehow warm and inviting; or the ange of entertainments and the Roman panheon of gods, or the way their Empire expansion took place, coupled with the nature of their enemies - the Goths and lannibal, to name but two.

Our foray into space had developed several core systems which transserred remarkable well to the Roman setting, and which, though they may seem minor to you as a player have totally transformed the way the game works. I have read one magazine describing Caesar III in a preview as "more evolution than revolution," which is in some ways true the core premise of the game remains identical. But the reality is that Caesar III is very much a revolution compared to its predecessors.

The way the farming and industry work, for example, is wonderfully simple for players but completely accurate and real (there ought to be a better word for the opposite of abstract), and in fact allows the game enormous depth that *Caesar II* never came close to. The combat system is truly simple, yet recreates ancient battles far better than the system used before, and adds more to the game by allowing street-to-street fighting.

I love the representation the game now provides of a busy ancient city. At the time, loved the way *Caesar II* brought ancient cities somehow to life. Yet to go back today and look at it, and compare it to a bustling city in *Caesar III*, shows just how big a leap we've made. The variety and pace of a city are what I hoped we might be able to capture, and we've exceeded the goals for that that I had hoped we'd meet. Again, I hope you'll agree.

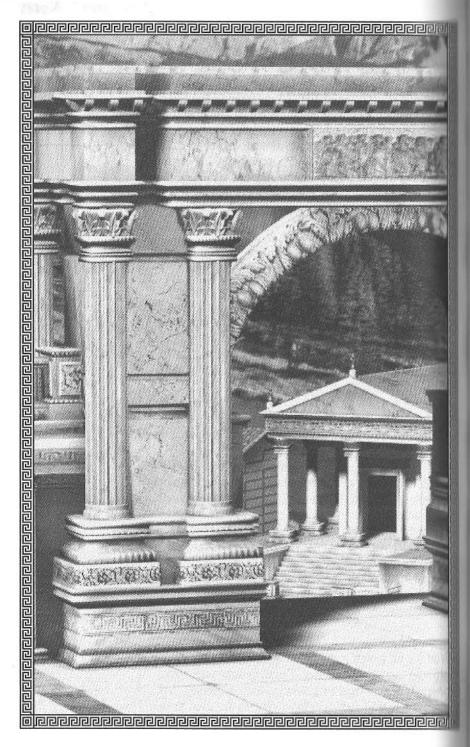

Probably the most satisfying thing of all is the way that the game is on the surface wonderfully simple, yet under the surface, offers lot and lots of depth and replayability. I believe

and certainly hope you agree) that we have added enough elements to later stages of the ame for it to continue to provide surprise and changes in strategies right to the end.

Above all, though, I feel as though we've created a game which will provide you with hours of fun. I do hope you agree.

PAVID LESTER IST AUGUST, 1998

BUILDING SUMMARY

or your convenience, all of *Caesar III's* structures are listed here alphabetically, with the information you're most likely want. The revised manual that you are resently reading corrects all of the errors resent in the manual's first edition

HOW TO READ THE TABLE

he first column after the building's picture tells you whether or not the structure needs road access. Most buildings need to touch a road so that they can pread their influence, or receive the influence of other structures.

the second column shows how the building affects the desirability of nearby property. A single plus or minus sign indicates a small effect. Two plusses or minuses signify a moderate effect, three mean a strong effect and four indicate an extreme effect on desirability.

the third column shows how many plebeians the building needs to achieve full employment.

the fourth column lists the building's price, in denarii.

The final column tells you what type of building this is, and gives a very short description of the building's special effects or requirements.

NOTES

YOU SHOULD CAREFULLY READ THE FOLLOWING END USER LICENSE AGREEMENT BEFORE INSTALLING THIS SOFTWARE PROGRAM. IF YOU DO NOT AGREE WITH THE TERMS OF THIS AGREEMENT, YOU SHOULD NOT INSTALL THE SOFTWARE AND IMMEDIATELY RETURN IT FOR A REFUND FROM YOUR VENDOR OR SIERRA.

This software program, any printed materials, any on-line or electronic documentation, and any and all copies and derivative works of such software program and materials (the "Program") are the copyrighted work of Sierra On-Line, Inc., its subsidiaries, licensors and/or its suppliers. All use of the Program is governed by the terms of the End User License Agreement which is provided below ("License Agreement"). The Program is solely for use by end users according to the terms of the License Agreement. Any use, reproduction or redistribution of the Program not in accordance with the terms of the License Agreement is expressly prohibited.

END USER LICENSE AGREEMENT

- 1. Limited Use License. Sierra On-Line, Inc. ("Sierra") hereby grants, and by installing the Program you thereby accept, a limited, non-exclusive license and right to install and use one (1) copy of the Program for your use on either a home or portable computer. The Program is licensed, not sold. Your license confers no title or ownership in the Program.
- 2. Ownership. All title, ownership rights and intellectual property rights in and to the Program and any and all copies thereof (including but not limited to any titles, computer code, themes, objects, characters, character names, stories, text, dialog, catch phrases, locations, concepts, artwork, animations, sounds, musical compositions, audio-visual effects, methods of operation, moral rights, any related documentation, and "applets" incorporated into the Program) are owned by Sierra or its licensors. The Program is protected by the copyright laws of the United States, international copyright treaties and conventions and other laws. All rights are reserved. The Program may contain certain licensed materials and Sierra's licensors may act to protect their rights in the event of any violation of this Agreement.

3. Responsibilities of End User.

- A. Subject to the grant of license hereinabove, you may not, in whole or in part, copy, photocopy, reproduce, translate, reverse engineer, derive source code from, modify, disassemble, decompile, or create derivative works based on the Program, or remove any proprietary notices or labels on the Program without the prior consent, in writing, of Sierra.
 - B. The Program is licensed to you as a single product. Its component parts may not be separated for use on more than one computer.
 - C. You are entitled to use the Program for your own use, but you are not entitled to:
- sell, grant a security interest in or transfer reproductions of the Program to other parties in any way, nor to rent, lease or license the Program to others without the prior written consent of Sierra.
- exploit the Program or any of its parts for any commercial purpose including, but not limited to, use at a cyber café, computer gaming center or any other location-based site. Sierra may offer a separate Site License Agreement to permit you to make the Program available for commercial use; contact Sierra for details:
- (iii) host or provide matchmaking services for the Program or emulate or redirect the communication protocols used by Sierra in the network feature of the Program, through protocol emulation, tunneling, modifying or adding components to the Program, use of a utility program or any other techniques now known or hereafter developed, for any purpose including, but not limited to network play over the Internet, network play utilizing commercial or non-commercial gaming networks or as part of content aggregation networks without the prior written consent of Sierra.
- 4. Program Transfer. You may permanently transfer all of your rights under this License Agreement, provided the recipient agrees to the terms of this License Agreement and you agree to remove the Program from your home or portable computer.
- 5. Termination. This License Agreement is effective until terminated. You may terminate the License Agreement at any time by destroying the Program. Sierra may, at its discretion, terminate this License Agreement in the event that you fail to comply with the terms and conditions contained herein. In such event, you must immediately destroy the Program.
- 6. Export Controls. The Program may not be re-exported, downloaded or otherwise exported into (or to a national or resident of) any country to which the U.S. has embargoed goods, or to anyone on the U.S. Treasury Department's list of Specially Designated Nationals or the U.S. Commerce Department's Table of benial Orders. By installing the Program, you are agreeing to the foregoing and you are representing and warning that you are not located in, under the control of, or a national or resident of any such country or on any such list.
- I. Limited Warranty. SIERRA EXPRESSLY DISCLAIMS ANY WARRANTY FOR THE PROGRAM AND MANUAL(S). THE PROGRAM AND MANUAL(S) ARE PROVIDED "AS IS" WITHOUT WARRANTY

OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT. SIERRA FURTHER DISCLAIMS ALL WARRANTIES WITH REGARD TO YEAR 2000 COMPLIANCE OF THE SOFTWARE, SPECIFICALLY, SIERRA MAKES NO WARRANTIE THAT THE PERFORMANCE OR FUNCTIONALITY OF THE PROGRAM WILL NOT BE AFFECTED BY DATES PRIOR TO, DURING OR AFTER THE YEAR 2000, OR THAT THE PROGRAM WILL BE CAPABLE OF CORRECTLY PROCESSING, PROVIDING, AND/OR RECEIVING DATE INFORMATION WITHIN AND BETWEEN CENTURIES, INCLUDING THE PROPER EXCHANGE OF DATE INFOR-MATION BETWEEN PRODUCTS OR APPLICATIONS, ANY WARRANTY AGAINST INFRINGEMENT THAT MAY BE PROVIDED IN SECTION 2-312(3) OF THE UNIFORM COMMERCIAL CODE AND/O IN ANY OTHER COMPARABLE STATE STATUTE IS EXPRESSLY DISCLAIMED. The entire risk arisin out of use or performance of the Program and Manual(s) remains with you, however Sierra warrants up to an including 90 days from the date of your purchase of the Program that the master disk on which the Program furnished shall be free from defects in material and workmanship. In the event that the master disk proves to be defective during that time period, and upon presentation to Sierra of proof of purchase of the defective Program, Sierra will at its option 1) correct any defect, 2) provide you with a product of equal or lesser value or 3) refund your money.

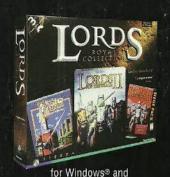

8. Limitation of Liability. NEITHER SIERRA, ITS PARENT, SUBSIDIARIES, AFFILIATES OR LICENSORS SHALL BE LIABLE IN ANY WAY FOR LOSS OR DAMAGE OF ANY KIND RESULTING FROM THE USE OF THE PROGRAM INCLUDING, BUT NOT LIMITED TO, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES. Some states do not allow the exclusion or limitation of incidental or consequentia damages, or allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you.

9. Equitable Remedies. You hereby agree that Sierra would be irreparably damaged if the terms of this License Agreement were not specifically enforced, and therefore you agree that Sierra shall be entitled, without bond, other security, or proof of damages, to appropriate equitable remedies with respect to breaches of this License Agreement, in addition to such other remedies as Sierra may otherwise have available to it unde applicable laws.

10. Miscellaneous. This License Agreement shall be deemed to have been made and executed in the State of California, and any dispute arising hereunder shall be resolved in accordance with the law of the State of California. You agree that any claim asserted in any legal proceeding by one of the parties against the other shall be commenced and maintained in any state or federal court located in the State of California, County of Los Angeles, having subject matter jurisdiction with respect to the dispute between the parties. This License Agreement may be amended, altered or modified only by an instrument in writing specifying such amendment, alteration or modification, which is executed by both parties. In the event that any provision of this License Agreement shall be held by a court or other tribunal of competent jurisdiction to be unenforceable, such provision will be enforced to the maximum extent permissible and the remaining portions of this License Agreement shall remain in full force and effect.

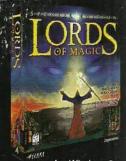

I hereby acknowledge that I have read and understand the foregoing License Agreement and agree that the action of installing the Program is an acknowledgment of my agreement to be bound by the terms and conditions of the License Agreement contained herein. I also acknowledge and agree that this License Agreement in the complete and exclusive statement of the agreement between Sierra and me and that the License Agreement supersedes any prior or contemporaneous agreement, either oral or written, and any other communications between Sierra and me.
